NEWS IN BRIEF

Temporary chairman

TAKING over as chairman of the Post Office for just one year while it is split into two is Robert Sir Henry Chilver, vice-chancellor of Cranfield Institute of Technology since 1970. Existing chairman Sir William Barlow leaves on September 11. The two new organisations already have chairmen designated. They are George Jefferson for British Telecom and Ron Dearing for the Posts and Giro Office.

40% more power

THE new ICL 2946, revealed last week, comes with up to 4 megabytes of main memory and in addition to DME/2, supports the latest release of VME/K with fully integrated DMS and TPMS. It offers 40% more power than the 2805.

Edinburgh micro

A MICROCOMPUTER teaching laboratory is to be set up at Edinburgh University in October. It will use a VME/860A computer and graphics system supplied by the UK agent, Dicot Electronics of Basingstoke, Hants. The system is based on a Digital Equipment LSI-11 and will be used for development and evaluation work and promote the use of UCSD Pascal at the university.

Joining Apple

INTEL Europe's vice-president and general manager, Tom Lawrence, has left the company to join Apple Computer in Cupertino.

The quality line-up for a great performance

Coping with the information explosion

IF has been estimated in the US that the average executive is presented with a million words to read every day. At 250 words per minute this would take 60 hours daily to get through!

The problem of how to cope with the information explosion and sift through the deluge of words to find those that are indispensable is becoming increasingly large in the lives of managers and professionals, and it is this that former Logica marketing consultant Jill Johnson is exploring.

Johnson has founded Mind Management Ltd to start research in this area, to get people to think about their own problems of

coping with the flow of information and to get them to decide what it is in it they want and need. She gathers detailed information from her clients about their reading habits.

In all the talk about the paperless office of the future, Johnson asserts, there has been little consideration of how executives select what they need from the enormous flow of information that comes to them every day.

She is talking about newspapers, magazines, published reports, internal reports, memos, mail. It is unrealistic to claim, in her view, that a significant fraction of this material will arrive in electronic form in the foreseeable future, despite such ideas

as newspapers on viewdata.

Even if it did, she asks, is it really practical to absorb this sort of information on a screen? A manager's real flair is in selection, she suggests, and he has to have a very fast way of skimming through large quantities of reading matter to find what is of importance to him. At present he can flip through a newspaper more easily than text on a screen.

The research that psychologists are currently doing into perception and learning is at a much finer level of detail than this, Johnson points out, and is not tackling the broader problem of how one keeps up with developments in one's field.

£1 million backing for Scots 'Nexos'

A JOINT operation by the Scottish Development Agency and two private institutions is to set up a venture in Scotland to manufacture distributed office systems of novel design.

Over £1 million is being invested in the company. Future Technology Systems, which aims to make a range of small business microcomputers which can be linked into a distributed system for data and word processing.

The Scottish Development Agency, the equivalent of the National Enterprise Board in England, is spending £400,000 on the project, while £250,000 each is coming from Scottish Northern Investment Trust and Castle Finance. The remainder of the money is coming from the firm's three founders, Peter McHugh and David Shear and Professor Martin Henley of University College Cardiff, who is providing the expertise in microelectronics.

NAS denies rift over joint Hitachi team

NATIONAL Advanced Systems has denied reports that it had pulled half its people off the joint development team at Hitachi's Tokyo centre where work is being done on NAS' own version of the Hitachi M-200H, which is understood to be ready for launching. According to NAS, the joint development team has always been split into two groups because its members are working at two centres, Hitachi's in Tokyo and the NAS centre at Palo Alto, California.

The joint team is primarily concerned with altering Hitachi's mainframes to make them software compatible with IBM systems. The instruction sets of the M-180 and M-200H are somewhat different from IBM's and the input/output protocols are radically different. The Hitachi machines, as sold in Japan, run under its own operation system, VOS/3 and not under any IBM operating system. Being US-based, NAS can contribute valuable IBM expertise to the modification programme.

NAS admitted to being unhappy at Hitachi's decision to supply its own computers and BASIC to its big machines in Europe in competition with NAS, which these firms are benefiting from the development. It has done.

I/O firms join forces

THE two companies, computer peripherals and I/O systems, are joining forces to develop a new I/O technology. The new technology will produce a wide range of semiconductor I/O devices for use in a variety of applications. The new technology will produce a wide range of semiconductor I/O devices for use in a variety of applications. The new technology will produce a wide range of semiconductor I/O devices for use in a variety of applications.

down-market from Nexos, the National Enterprise Board's venture which is designing a large scale electronic office system focused more on text handling than data processing. On the other hand, in so far as Nexos is also selling stand alone word processors, the two ventures will be competing. FTS expects its customers to be firms with up to about 200 employees.

Advanced

Design of the products is already well advanced, with software packages on the stocks for word processing, accounting and sales. Users will be able to program in such standard languages as Basic and Cobol. The philosophy is that users should be able to start out with a small self-contained machine and then upgrade to a linked system without changing product range. A small central processor will be available for linking the micros and handling central files.

In this sense FTS is aiming

Just one more tug!

JUST one more tug to make sure it is securely packed and this ICL ME23 computer becomes the first to cross the Atlantic to Canada.

Bound in ICL's own top grade polythene, the machine is going to Standard Tube of Woodstock, Ontario. It is to replace IBM System 3 and System 32 processors.

Most ME23 sales so far are for export and ICL has 300 orders in hand. It hopes to be delivering about 80 a month by Christmas.

Row over US mail electronic plans

THE US Postal Service's controversial Electronic Computerized Mail service is set to go live in January 1981, despite continuing disagreement with various regulatory agencies over the scope of the service and how much competition will be allowed.

The Postal Rate Commission, which oversees the US Post, has specified that the service should be experimental, with a finishing date of October 1984, and is protesting against this the US Post is appealing to a federal court.

Users of ECOM will be organisations that mail large numbers of invoices and the like that are produced by computer (CW March 6). The text will be sent electronically to a post office near each client where a printout will be made which is delivered by hand in the mail.

Whether it will be open to communications firms to carry the electronic part of the message, or whether the US Post will have strict control over this, is still in doubt.

The Federal Communications Commission has also been trying to exert control over ECOM, in conflict with the Postal Rate Commission.

East Germany catches up with a bit-slice micro

DETAILS of a new bit-slice microprocessor from East Germany strongly indicate that the Comecon countries' microelectronic technology is beginning to catch up with that of the West. A review of the two newest minicomputers from East Germany's Robotron confirms the forecast (CW, June 12) that the U830 chip is an eight bit wide bit-slice micro.

Briefing

'2966' due in October

THE ICL 2966, unofficially dubbed the 2966, is pencilled in for launch in October.

The machine will be ICL's biggest microcoded processor and is expected to offer twice the power of the 2960, up to eight megabytes of main memory for George 3 DME, and could include ICL's time-slice architecture which will allow DME and the VME/B operating system to run simultaneously.

An alternative theory is that it is based on an old Signetics design. Two minicomputers have been built using the chip. The K1620 is a small 16-bit minicomputer with up to 32K-words of main memory, 4K of which are reserved for things like input-output buffering.

Mini for Monotype

THE new IS 2000 minicomputer, designed and manufactured in Britain, has been adopted by Monotype as the front-end processor for its film-setting computer-controlled typesetting system. Built by Intersect of Brixton, the IS 2000 is also the basis of a new business system programmed in Video.

Deal Board plans

THE Deal Board is laying plans for introducing distributed computing into its operations. Amdahl of both ICL and IBM frames, with a 2870, 2848, a 2870 and two 370/158s, the board is considering the ICL 2960 and IBM 8100.

A Russian software exchange has been set up.

AM Jacquard

AM JACQUARD has asked us to find out if it is possible to place sales offices in Manchester and Southampton earlier than the current dates of November and Birmingham as set last week's front page. The company's direct sales activity had been terminated.

Three bidders

THREE companies, EB Computers of Kettering, Digital Data Systems of Basingstoke, and the British Telecom Systems Division, have been invited to bid for the development of a new system for the British Telecom Systems Division.

The last power cut...

LAST week's long service award went to the pair of English Electric KDF9s at the National Physical Laboratory in Teddington, as the power was turned off for the last time. The first machine was installed in June 1964 and the second came from the National Computing Centre in 1968. The pair were finally made redundant by the commissioning of an ICL 2972.

Our picture shows the engineers' panel on the newer machine being examined by Chris Davies of Computer Field Maintenance, which has maintained the machines since 1974. The demise of these machines still leaves three KDF9s in the field.

Gene Amdahl lifts veil on Oslo

AMDAHL Corp's answer to IBM's forthcoming T/series is called Oslo, and according to Dr Gene Amdahl will feature a micro-instruction which overcomes the problem that micro-code instructions are slower than those which are hardwired. "When I was working on Oslo, I invented a different form of micro-code control. It allows you to make a branch without

making an additional memory access," says Amdahl.

Up to now, Amdahl has rejected the idea of multi-processor, believing that it is always possible to build a single processor which will offer the power of the biggest multi-processor complex IBM can manage.

However the Oslo machines will feature a complex form of "interweaved" multiprocessing.

"The Oslo machines will be able to do multiprocessing at great economy," he says, suggesting that a full understanding of the use of the system can make a multi-processor complex running under an operating system like IBM's MVS much more efficient than has hitherto been possible.

Dr Gene Amdahl has now set all eyes with the company's re-forecast.

Dol backs real time software training

THE Department of Industry is to support a new training course for engineers in an attempt to relieve the shortage of skilled managers of real time software products.

The course, Real Time Software Product Management, was developed by the National Computing Centre with Cranfield Institute of Technology and Marconi Avionics.

The course is to answer the need identified by Professor J. Merriman, chairman of NCC, for 400 people over the next four years to undertake systems engineering.

The objectives of the course are to give engineers an understanding of the life cycle of software, to help them identify major concerns in the progress of a project and to cope with the necessary documentation and forward planning.

System 38 'thrills' UK user

THE first IBM System 38 user in the UK, the Hospital Saving Association of Lancaster Gate, London, is thrilled at the increased programmer productivity offered by the new machine when compared with the System 36 it is replacing.

The organisation says that RPS III productivity is excellent and it expects to write programs three to four times more quickly. With one day for coding and one day for testing, a business suite of 16 programs has been reduced

to a single online program of 350 lines - and 108 of those are comment.

Hospital Saving Association is a club for National Health Service users, paying out cash for things like glasses and dental treatment.

Subscribers did not like the need to quote their policy numbers to get information on the old system; the System 38 relational database allows a variety of alternative keys to be used.

Acquiring an IBM computer?

The choice is yours

Choosing the right method of acquiring computer power for your organisation can be looked at as a balance between cost and flexibility.

The longer the period you commit to one system the cheaper the monthly cost. But you cannot easily change as and when new systems become available.

If however, you believe your organisation's data processing requirements are likely to change over time it's important to be able to change your computer system. Providing this flexibility will almost certainly mean a much higher monthly computing cost.

It is this desire for flexibility at an economic price that led Atlantic to pioneer and develop Flexlease. Quite simply Flexlease enables your organisation to lease IBM computer power tailored to your specific requirements at extremely attractive terms PLUS the vital facility to change your system! Simply, quickly and with the minimum of effort. So you end up with computer power that's as responsive to change as you are.

Before you take that important computer finance decision call Atlantic and find out why Flexlease is quite simply a better way of acquiring computer power.

Heading for trouble

SOME of our readers have found it odd that Computer Weekly has a section called Page Six. It is of course an old computer tradition to refer to things by their addresses rather than their contents, and this is dying hard, despite the efforts of Gordon Scarot and his CAIS team at ICL.

It does raise practical difficulties, as when we were having problems at our printers and had to put Page Six on page four.

You may be interested to know that we are not the only publication with a Page Six. The other I know of is the New York Post, Rupert Murdoch's transatlantic version of the Sun, and Page Six there is a gossip column. (Gossip column? What are they?)

The Post is engaged in a permanent circulation war with the New York Daily News, and shows remarkable ingenuity in its efforts to come up with attention-grabbing headlines such as "DEAD WOMAN WINS ELECTION". It even succeeded once in combining sex and violence in one heading: "Nude bathers look on in horror as 2 die in air crash".

We're still waiting on CW for a chance to print such headlines as "Model girl strangled with paper tape". Not that we

want any of you to go out and generate the news for us. But if you could engineer "You know who goes bust" that would do fine.

"That confirms it then, gentlemen, J.R. shot himself."

Imprecise

REFRESHING candour from Unilever Computing Services, which has just rushed out a manual for the new high-level language it is marketing. Speakeasy. The manual is only two-thirds finished, however, so it has been dubbed Release 0.87. I am disappointed by UCL's lack of precision, though; in our ultra-scientific business it should of course be Release 0.880886...

One man's junk is...

LOGICA has finished its report on how to automate the Australian Parliament (the paper handling, that is — they're not actually contemplating replacing the legislators with chips). In the midst of the interviews with prospective users one outspoken Senator asked whether he would want a provision in his electronic mail system to protect him from junk mail.

"Ah well," said the Senator, "one man's junk is another man's antique."

MICHIE'S PRIVATEVIEW

Sing a song for Lefty Long

EVERY year, the Royal Society of Canada sponsors a meeting on Prospects for Man, at York University, Toronto. This year's theme, computers and society, was introduced to a gathering of 500 by the University president, Ian Macdonald, a former Balliol economist.

In rising to his challenge most of the speakers stuck to what they knew, and I dare say we formed a prosy enough procession. But for those who knew it all already, Dr Adam Osborne, a young publishing executive, dispensed raw lemon at his time into open mouths.

We are not regulators, planners, or even prophets of this technology, he warned, but its helpless prisoners. The dams have burst. We are whirled along on the tide's ruthless currents. The only constants now are the ferocities of the market place, and the greed and imbecilities of human nature. If we do not care to believe, then we have not long to wait.

By the end of the decade, Dr Osborne claimed with menace, half the population will be out of work and rioting in the streets.

As I left the hall by taxi I noted the sways of Toronto's vast streets, rioting grounds of the future. Would my driver, I wondered, be among them?

"What do you think of computer-controlled automation?" I blurted out.

"Surprising," he said (and I already knew that this bristling middle-aged man was from Ireland), "about robots. They paint-spray the cars inside, as well as out. It's something just beginning. But it will be everywhere, they say."

"What about unemployment?" I prompted.

"Earlier retirement. Who's going to mind that? We should put the extra wealth into the retired people. The senior citizens' lives — just imagine."

"You mean adult education?" I prompted.

"If you like going to classes. Some do. But everyone likes to

be entertained. I had my own group. I sing, you know. Country style mostly, but anything ethnic, anything at all. We'd do two spots on the Monday and Tuesday at the tavern, one extra

By the end of the decade, Dr Osborne claimed with menace, half the population will be out of work and rioting in the streets.

each night just for senior citizens. They brought bus-loads from the old-folks' homes. Sing a Song for Lefty Long, that was the promotion, because when I'd got them going I'd put the spotlight on a table, and that table would have to sing a song. Then they'd get a free drink. Now everyone loves to be bought a free drink, because they reckon it at retail prices, you know. But to the management it costs next to nothing!

"I hadn't thought of that." "You won't believe it, but I was approached to do a Lefty Long show on radio. I got the

name Lefty when I was a footballer."

"So you took the radio offer?" "No. You see, I already owned my own taxi, yet hardly used it. With pub singalongs and such, I make enough. My six kids are all grown up. The radio show would have been every Sunday. But Sundays I like to be up at the lake. I have a school bus there, you know. No engine of course; I've converted it into a fishing lodge."

Mr Long paused. "You see," he added, "at the age I am, I'm not here for ever. I like this world. I want the best from it. So if someone wants to take from me even one minute that otherwise I can use for myself, I am going to give him a hard time."

In the panel discussion at the meeting's closing session, Gordon Thompson of Bell Northern Research provoked spontaneous applause. "It's not a question of work versus leisure on the old definitions. On my definition, leisure is what you would still do even if you weren't paid to do it. So if the micro-chip revolution abolishes work, all work, so that we only have leisure, then what I say is... great! I say: at last we've done it!"

Utopia sounds more plausible, it must be conceded, to an academic audience, an audience neither under-nourished nor illiterate, and good chances of

Professor Donald Michie is head of the Machine Intelligence Research Unit at Edinburgh University.

averting Dr Osborne's vision will certainly require ingenuity. To that extent he has a point. But it is a point which has been made before. Not so

If someone wants to take from me even one minute that otherwise I can use for myself, I am going to give him a hard time.

more than a century ago we considered undesirable to replace factory labourers, whether adults or children, for less than 14 hours a day. If left with their own hands, it was felt, they would all be rioting in the streets.

As every schoolboy knows, at the event they rioted anyway, and got their hours reduced.

Harris plans rival to IBM 8775 VDU

NOW that IBM is offering the 8775 display terminal as an alternative to the 3270 (CW, August 26) one of the leading suppliers of 3270 compatible kit, Harris has revealed that it plans to introduce a competitor for the 8775. The screened screen of the 8775 could make it more attractive than conventional 3270 type units to many IBM users.

Harris UK sales manager Andy Surtees told Computer Weekly that his company intended to carry out a study of the potential market for the 8775 and would probably bring out a similar product.

On the technical side Surtees pointed out that no specifications were available yet from

IBM on the 8775 in its new role as a 3270 alternative. But he recognised that a big difference between the new version and the existing 8775 model would be interactive communications facilities.

Sophisticated

In its existing role as a VDU on the 8100 distributed processing system, the 8775 operates purely in local mode, while the new version offers sophisticated communications facilities like SDC support.

The 8775's screen sectoring feature enables the screen to be divided into eight separately addressable sectors and the cursor to be allocated to any one of them. The 8775 is driven by a

Motorola 6800 microprocessor. Surtees believes that the multi-microprocessor design of existing Harris 9200 series terminals would enable the screen sectoring feature to be added fairly easily.

ITT Business Systems, another big supplier of 3270 compatible terminals, said that it had no plans at present to introduce an alternative to the 8775. ITT also differs from Harris in not having announced its intention to bring out an alternative to the IBM 3279 colour display.

Development of Harris terminal products for IBM users is mainly carried out in the US by Harris Data Communications, the kit being sold in Europe by the international division of Harris Information Systems which markets all Harris computer products, including its minicomputer line.

ITT's 3280 equipment is built at Phoenix, Arizona, by the operation that used to be owned by Courier Inc.

Police choose SPL for 999 calls

AFTER spending 18 months in the evaluation of various tenders for the project, the Northumbria Police Authority has chosen SPL International to supply its dispatching and message switching system to be used for monitoring staff activity.

The project is worth over £2 million and over half that amount is in areas outside the hardware cost. It is expected to take 25 man-years of work to complete, and will eventually help to keep track of 4,000 officers and civilian staff.

Tandem hardware is to be used, with the message switching package ADS. VDUs and printers will be distributed throughout three area operations rooms and 30 other locations to provide online interrogation, update and local print facilities.

The application software is to be in Cobol and TAL, Tandem's own mock-structured high level language, but the police authority is not ready to release details of design.

The plan is to receive incoming calls for police help at the relevant operations room serving that area. The details of the message will then be recorded using the VDU and adding any further comments.

The information is then automatically transferred to another operator whose job is to reference the resources available in the area and despatch the nearest free officer to attend the incident.

First system

The system is to run under the Guardian operating system using the standard Tandem software, Encompass.

It is the first UK police system to be based on the Tandem hardware and will use the Tandem Non-stop configuration with four processors and eight 240-megabyte disc drives. This will be linked via a Racal-Milgo communication network to 111 Lynwood Beta VDUs and 47 printers supplied by Texas Instruments.

Developments will take place on SPL's own in-house T16, and the firm's ADS-365 message switching system, adapted from Plessey's DMS-860 package, will be used.

SPL recently signed a two-year OEM contract with Tandem worth £1 million (CW, December 13, 1979) and has already fulfilled it.

Discussions...

"We've just started discussions on the design with the manufacturer," explained Chief Inspector Terry Yeomans, "and already it is clear that there will have to be some compromises. Some of the ideas we had aren't absolutely sound."

Which electronic office?

SEVERAL companies over the last year have announced proposals for the design of an electronic office system, and now we have a chance to compare them in front of an audience of interested claims to have taken a real step towards the office of the future.

On October 2 and 3, Business Information Techniques is presenting a conference in London which, which Electronic Office? will bring senior staff from Prime, Philips, IBM and other time will describe their different approaches to office automation.

During the conference and presenting an introductory survey, will be Rory Johnston of Computer Weekly. He will also be looking at the various approaches to office automation, and will be looking at the various approaches to office automation, and will be looking at the various approaches to office automation.

Mini enhancements

ENHANCEMENTS for the Honeywell Level 6 mini include a Basic Interpreter or interpreter/compiler and a file transfer facility under the GCOS 6 and MOD 200 operating system. New Cobol, Fortran and Basic compilers and a data entry subsystem are offered under MOD 400.

Online training

AIR conditioning specialist Denco Miller has opened a new office at Monaco House, Bristol Street, Birmingham, B5 7AS. Tel: 021-622 6261.

Civil liberties body calls for law to control personal data files

A LAW controlling the use of personal data files, without the establishment of a Data Protection Authority, should be enacted as soon as possible, in the light of the present government's reluctance to set up any new quango.

That is the view of the National Council for Civil Liberties, which has drawn up a proposal including the provision that both computerised and manual files should be covered.

Under the NCCL's proposed Protection of Personal Information Act, all organisations with files of personal information would be legally obliged to publish their existence and provide ways for data subjects to know whether they are included, inspect their entries, insert corrections, and have corrections circulated to anyone who may have received wrong information.

Only criminal investigation and medical records would be exempted under the scheme. Disputes would be settled by an

arbitrator, who according to the subject area would be the national, local government or health service Ombudsman, the Director-General of Fair Trading, or an industrial tribunal.

First fruits of System X

THE first fruits of the accelerated System X development programme will be displayed next week, when the Junction Tandem exchange at Bynard House in London is formally opened by Peter Benton, managing director of British Telecom.

The exchange has been operating successfully since early July, switching calls between local exchanges in various parts of London. But subscribers will have to wait about six months for the first local System X exchanges.

Now there's a better VDU for Honeywell systems

And you can have it sooner

It's Data Logic's PTS 100 and it's available on three months delivery. Your operators will prefer its 15" green phosphor display. And they'll be more effective, thanks to the better layout of our keyboard and the user-programmable function keys.

The PTS 100 supports large clusters and a variety of printers up to 600 lpm, which can be mixed on a single system. As a bonus, ICL, IBM and Univac protocols are also supported.

The PTS 100 comes from Raytheon, the world's largest manufacturer of plug-compatible terminals. Data Logic provides fast field service nationwide, from 19 UK locations. So you can rely on the better VDU, and us, totally.

Call or write for a demonstration. We know you'll be convinced.

Main data storage. High speed retrieval and high speed data collection. Microprocessor controlled. 500 character storage. 15" green phosphor display. 15" green phosphor display. 15" green phosphor display.
from only £995

TEXAS 810
Compact 10" x 12" screen VDU. Full editing features, printing, blanking, cursor addressing, text transmission, protected fields, dual memory, separate function keys, status display. Optional alternative character set, programmable function keys, synchronous interface, line drawing set.
from only £1275

TECHTRAN 850
Main data storage. High speed retrieval and high speed data collection. Microprocessor controlled. 500 character storage. 15" green phosphor display. 15" green phosphor display. 15" green phosphor display.
from only £995

LOW COST GRAPHICS TERMINAL
A low cost Tektronix 4010 software compatible terminal. Full editing features, printing, blanking, cursor addressing, text transmission, protected fields, dual memory, separate function keys, status display. Optional alternative character set, programmable function keys, synchronous interface, line drawing set.
from only £1275

TECHTRAN 850

PAGE SIX for programmers and analysts

Experience is Catch-22 for job-seeking TOPS graduates

I FEEL I must write to you in an attempt to prevent other people becoming victims of the same circumstances in which I now find myself.

On January 7 this year I commenced a CDI (Control Data Institute) computer programming course, after giving up a successful teaching career because of a deep desire to work in the computer industry.

At the initial aptitude test and at a subsequent interview I was assured, provided I made a reasonable effort and satisfactorily completed the course, I would have a 98% chance of obtaining employment.

I completed the CDI TOPS course without any problems and to the complete satisfaction of my course tutors. This was nearly three months ago and now, despite 160 letters of application and enquiry to nearly every computer user within a 40-mile radius of my Red-ditch home, and the little assistance

given by CDI, I find myself unemployed for the first time in my working life.

My excellent educational qualifications, including language degree, faultless work record with my previous employers and high attainment on my CDI course, seem to be of little matter to prospective employers which seem to be far and few between. In fact 50% of my fellow CDI graduates are also still unemployed despite many reassurances to the contrary by CDI prior to and during the course.

In conclusion, I feel disillusioned, betrayed and frustrated by the wastage of my efforts, dedication and aptitude, not to mention the waste of government finance in the payment of my costly training. I hope this cautionary account will be taken into consideration both by prospective TOPS students and those responsible for the financing and implementation of these courses.

Redditch Mrs A. M. SMITH

IT WAS with great interest and amusement that I read Alistair's Adventures in Computer Land (Page Six, August 14).

I am 27 and after four years of teaching I decided the time was right to seek new pastures within the wide and wonderful world of DP.

My decision was not arrived at overnight and after long conversations with both friends in the industry and my local PER I had a go at the IBM aptitude test for the TOPS course in systems analysis run by KBS in Leeds.

I was successful and accepted for a course which started in October 1979, and after a gruelling but enjoyable 22 weeks finished in March of this year. However, from there on the going got considerably more sticky.

After a barrage of letters and telephone calls in search of employment I got an interview with a major American manufacturer. They interviewed me three times (two formal, one informal

over a pint in the pub). They then took up references and sent me for a medical. Although still looking around and not counting my chickens I reckoned I had this one sewn up.

About five weeks later I received a phone call saying my application could be taken no further as my references were not satisfactory; even though I had personally contacted my given references in advance and been assured of good testimonials.

Well, to date I have applied for 96 jobs and received three interviews. I was rejected at one and am awaiting the outcome of the other two. I have tried every type of approach from humility to out-and-out cheek.

I realise that I am not the only person in this predicament, but perhaps one of your readers can suggest a way of overcoming the Catch-22 situation of experience necessary to gain experience.

ALISTAIR J. S. MACDONALD Bradford

Why are they not wanted?

THESE two letters featured on this page today and the one we received last week are typical of the plight currently experienced by a large number of TOPS students.

The Manpower Services Commission itself has said that figures this year are well below the 98% quoted for last year, and the placement of TOPS students is becoming increasingly difficult.

Although we mentioned two weeks ago on this page that many programming schools are not what they seem, we must point out to any prospective TOPS programmer that a company does not necessarily have to be a good one to qualify for TOPS support.

Companies do not agree to train programmers via the TOPS scheme out of the goodness of their heart. They receive a grant from the government if they run

TOPS courses, and obviously if a firm can say that it has successfully trained 100 or so programmers this year it sounds very good and is likely to impress other employers who will pay large sums to have their staff trained.

As long as a firm can provide the basic facilities and staff necessary to run a training scheme, it can qualify to operate TOPS courses. This isn't to say that the MSC is happy to send you along to any old place. It just means that it really can't tell which is a good place for TOPS and which isn't.

No matter how big the company, how well-known the name, no one firm can assure you that you will get a job after

taking its course. And if it tries to tell you that you will, take it with a pinch of salt.

Interviews

Getting a job is a difficult business these days for anyone. There is no short cut. After finishing a TOPS course, you will have some basic skills and some acquaintance with computer systems. You will not have any qualification as a programmer, only the ability to become a trainee programmer — quite a different kettle of fish.

To be fair, you will not have been selected purely as a result of your performance in aptitude tests. Interviews also count, be-

cause no matter how good you are at mental arithmetic or anything else, if you don't come across well in an interview before you take the course, the chances are that you won't have you've finished it either.

Companies operating under the TOPS scheme usually take this into account and avoid taking on "unemployables" as much as if they were interviewing them for a job within their own company.

Most TOPS programming courses are the same. Some companies offer a choice of programming language, or teach by different methods, for example by self-help techniques rather than classroom methods. Basically, however, the con-

tent is the same. Students usually learn Cobol and write a suite of five programs ranging from a print program to a simple payroll or something like that.

You will find, however, that the methods of teaching programming these days have not varied very much for the past five years.

Still unsuitable

This means that when you have completed the course and get a job, an employer may well find you unsuitable to do the kind of work he requires.

The employer might employ programming methods with which you are as unfamiliar as you were before you even thought of taking a TOPS course.

This seems to be one of the main reasons for the reluctance of employers to take on TOPS graduates. But it is by no means the only one. The general recession and the fact that people in general need a speedy solution to their staff shortage also contribute.

The training bodies are also a little to blame. If a company is going to train people as programmers, whether financed by the MSC or by private employers, why not go the whole way and give them the real treatment? That means teaching them the latest techniques and actually finding out what sort of basic training employers need and want.

Stick it out

And that leaves you. Unfortunately, if you are already in the situation described by our correspondents there's nothing for it but to stick it out, keep applying and don't lose heart.

After hearing the sorry tale of so many TOPS programmers, Page Six would welcome any comment from employers who can tell them, and us, why they are not wanted.

CONFERENCE Symposium on micro opportunities

A symposium on Microcomputer Applications and Opportunities is to be held at the Institution of Electrical and Electronic Engineers, 1, Whitehall Court, London WC2R 2BS, on September 23-24. The conference is aimed at those in electrical engineering, electronics, computing, and related fields who are interested in the use of microcomputers in their work.

The conference is organised jointly by the Institution of Electrical and Electronic Engineers and the Institution of Mechanical Engineers. It will include an exhibition of microcomputer-related products and services, and a series of lectures and seminars on topics such as microcomputer applications in industry, education, and research.

The International Computer Data Processing Society (ICDPS) is holding its annual conference in London on October 14-15. The conference will focus on the latest developments in computer data processing, including topics such as database management, data communication, and data security.

SOFTWARE FILE

'Too sophisticated' DL/I is dropped in favour of Total

by Claire Gooding

USING DL/I we needed a systems programmer who knew exactly what it was all about. We do not have one now. This comment highlights a difficulty faced by installations which, tied by investment in existing systems, try to fit their needs into the IBM software mould.

It was made by John Richardson, manager of a project at Luton engineering firm, Hayward Tyler, which found IBM's database management system, DL/I, too sophisticated and complex for its needs and dropped the product after months of planning, to replace it with Cincor's Total, which was up and running in matter of weeks.

Planning

The project team, whose first task for the database was a purchase order system, had difficulty matching the complex requirements of DL/I's structure.

"It needed long term detailed planning," said Richardson. "You had to be sure that the needs as currently stated would stay the same for the next 10 years or so — and that's impossible."

Although IBM gave all the help they could, morale on the team fell as the project dragged on, and people began to leave. The final blow to the attempt to implement the database came with a pilot run of DL/I. The mere loading of it slowed down the response time of the system from the customary two seconds to six or seven.

explained Richardson. "It chewed up half a megabyte infinitely — it felt as though we'd got the anchor out all the time."

"All we really wanted was an online database," he continued. "and DL/I was obviously too complex for our needs. We were using perhaps only 10% of its ability."

Problems

The problems in implementing DL/I and the loss of DBOMP maintenance prompted the firm to look away from IBM products and consider others.

Total, a database system which has been around since the late Sixties and is implemented on a large range of large and small machines, met the needs of the purchasing system and looked as if it could cope with further developments.

Hayward Tyler needs to look to the future, and although Total costs £12,000 a year, it matched data requirements and will enable the firm to drop DBOMP within a few months, as well as adapting to the planned upgrade to IBM 4331 in the future.

It also took only six weeks to get up and running, with programming ahead of schedule.

Interactive packs for micro systems

A PAIR of interactive business packages for payroll and administration of sales, purchase, invoicing, reporting and other daily tasks for the small business is being launched by Horizon Software, which specialises in micro-computer applications.

The packages will be aimed at the small business user at first but Horizon director M. Shafruk said: "We are considering moving them into the mainstream market."

Nixdorf's challenge to IBM's DOS/VS

HAVING taken on IBM at the lower end of the plug compatible market (CW, June 12) Nixdorf is entering the battle armed to the teeth with two new software products and three updates. With the purchase of the Computer Software Co of Virginia, Nixdorf has acquired enhanced versions of IBM's DOS operating system and a software products arm, now called NCSC.

It is now making a bid to attract customers to its NCSC database, its data dictionary and other alternatives to IBM products.

Nixdorf's flagship is EDOS/VS, the DOS/VS look-alike operating system for IBM 360, 370, 380 and PC mainframes. According to Nixdorf, EDOS/VS contains many features only recently announced for DOS/VS and has others which are available only to OS/VS1 and MVS users.

Alternative

Nixdorf says there is no getting involved in moving from a DOS to an EDOS environment and claims that EDOS can be an alternative to expensive software and hardware upgrades by getting the most out of the current system.

The latest version provides increased I/O processing speed with priority channel scheduling. Release 1.2 also includes enhanced 370/158 support, and 3800-1C disc support. Improved operational navigation and search facilities are also included. Standard features of EDOS already include 12-partition support, real storage management and extended operator console support. The EDOS procedure library permits conditional execution of jobs and up to 16 levels of nesting.

Support

The system also supports OS/VS partitioned data set (PDS) with a complete online management system. It handles multiple updates, multiple partition, or even multiple CPUs, become possible.

Three MicroFocus products in OEM deal

THE third product, Forms 2, is a development tool for use with Chubb, which helps the user create screens and programs. The software will be available to Chubb users worldwide, and according to an Ontel spokesman, will provide an even broader scope of utilization for Ontel OEM users.

AEG Telefunken, part-owner of Modcomp, recently bought a 10% stake in Ontel (CW, July 3).

THE BEST THING NEXT TO A MINI-COMPUTER

Mini-computers are amazing things. But as soon as you invest in one the next best thing to do is buy a Chubb Fire Resisting Computer Data Cabinet. Conveniently positioned next to your mini-computer, it will provide constant, on-the-spot protection for all your vital information, keeping it safe from pilferage, misuse and, most importantly, from fire damage.

The incidence of fires in office premises, and the ensuing insurance costs, continue to rise. So too does the number of companies turning to computers in order to speed up and simplify their general day-to-day business.

Insurance companies are encouraging their clients to increase protection of buildings and contents. But data storage is important too. If you lose your business records, you could lose your business.

At Chubb, painstaking research, years of experience with customers' fires and rigorous testing techniques have resulted in a range of specialised computer data cabinets. Designed to withstand a major blaze they will prove to be the very best thing next to your mini-computer.

Please tell me more about the best thing next to a mini-computer.

FOCUS

IF the Post Office thought it could avoid the slings and arrows of outrageous criticism merely by changing names, then it has got the wrong line. British Telecom is now on the receiving end of computer industry stilet.

A further nudge was given last month by Dr Roger Carrivick of Butler Cowi. Speaking to the Service 400, an international telephone organisation, he suggested that the recent liberalisation of the PTTs could be taken as an admission of defeat. International PTTs are all, apparently, in a tumbledown state and much in need of a facelift.

This facelift will need to be more than the change of colour from yellow to blue. While lifting the face of the PO is a fascinating thought, especially where Buzby is concerned, wholesale improvement in PTT service could be tough work on the DP teams.

For many years, the PO has

Lifting the face of the PO

acted as a convenient safety net for the computer operation. That wrongly coded data could be blamed on poor transmission lines. The inefficient terminal is the fault of the PO-supplied modem. Those long VDU response times can be assigned to an asynchronous communication. Additional computing facilities can be blamed by suggesting that while the DP team could tackle the problem, the PTT could not. The PTT's role in the assignment of some computerable time, if not longer, is placed in the PTT's pending tray until the PO supply and

connection position becomes clearer.

For the DP team, however, too much knocking of the PO is not a recommended policy in the long term. Computers are increasingly interfacing with telecommunications — whether it is linking East and West India Dock Roads, or Baker Street with Hong Kong. Even the recent 50% leased line increases will not stem the demand.

In fact, keeping pace with telecommunications requires more than a set of international directories. Knocking the PO telecom installation boat could well leave the DP installation high

and dry. Companies, computers and telecommunications are closely linked in real time, both in-house and remote. That PO explanation has failed to keep pace with worldwide demand is probably the major factor behind the decision to free certain Post Office monopolies. When seemingly the whole business world suddenly demands to join the electronic office club, or be connected up with videodata, Prestel and Teletext, it is hardly surprising that telecom resources become strained.

It seems rather strange that the DP industry is not switching on some practical telecom courses, seminars and workshops.

Getting to grips with telecommunications is a vital necessity for the DP professional. Otherwise the UK computer world could be left getting the time-pipe or extended engaged

lines. The training bodies are also a little to blame. If a company is going to train people as programmers, whether financed by the MSC or by private employers, why not go the whole way and give them the real treatment? That means teaching them the latest techniques and actually finding out what sort of basic training employers need and want.

Stick it out

And that leaves you. Unfortunately, if you are already in the situation described by our correspondents there's nothing for it but to stick it out, keep applying and don't lose heart.

After hearing the sorry tale of so many TOPS programmers, Page Six would welcome any comment from employers who can tell them, and us, why they are not wanted.

MICRO NEWS

by Eileen Stainer

Intel prices drop by 40%

PRICES of Intel Magnetics' bubble-memory subsystem components and boards have been reduced by more than 40%. Further similar reductions for quantity orders will take effect in August 1981 and 1982.

Intel will be able to shift large quantities of the devices this way, although the company does not give this as one of its reasons for making the reductions. It regards the price cuts as a sign that the technology is becoming increasingly popular in the commercial field, and attributes them to better productivity.

The 100-piece price of the BPK72 prototype kit which

comprises a one-megabit bubble memory module and six LSI support chips drops 42% immediately to £1,100. For OEM applications the ISBC280 board drops 26%.

In August 1981, Intel plans that orders of 5,000 or more BPK72s will be priced down 40%. The year after, quantities of 25,000 will be reduced another 50% from the 1981 prices.

Even with these reductions, bubble memories will still cost more than their mass storage alternatives like battery-backed RAM and floppy discs.

Nevertheless, the technology is solid state and has high capacity.

LX500 with double memory

AN enhanced version of the Logabax LX 500 Z80-based microcomputer has been announced in the UK. Main memory is doubled to 64K-bytes, and the larger version incorporates double-density minifloppies for a total backing store of 384K-bytes.

With a VDU and printer as shown here, the new version costs £2,500, and the first UK sale has been made to the Severn and Trent Water Authority, which wants it for a pilot budgetary control, forecasting and customer complaints system.

Tandy backtracks with Model III

TANDY'S pocket computer slipped by several beady eyes before a distinct similarity to an equivalent Sharp product was noticed. The company has now admitted that its pocket computer is basically the same device as Sharp's PC1211.

The Japanese company has agreed to manufacture its product with multiloop facilities for Tandy, to market with its own TRS-80 label. According to Ted Russel, an ex-director now buyer for Tandy UK, it was not worth the company's while to design and manufacture such a product itself.

Filling a gap

However, Tandy emphasises that its other two new TRS-80 products, the Model III and the colour computer, are US designed and manufactured. Only the former will be available in the UK and that will not be until June next year. The Model III is on a level with the SuperPet, claims Tandy.

In fact Tandy seems to be filling a gap in its marketing direction with the Model III. After the introduction of the Model I, which was developed mainly for the hobbyist, came the Model II advanced business system which, says Tandy, is comparable with the Apple III.

That left a hole in the market for a desk-top general purpose microcomputer system, the

Model III. Tandy's line-up is now in the order of Model I, Model III, and Model II at the top.

The TRS-80 Model III will be available in three versions; one with 4K of RAM; one with 16K; and a desk-top version with 32K expandable to 48K. Each version will be in one unit with a 65-key keyboard, a 12-inch video monitor and a power supply. Model III is also housed in one unit with a minimum internal memory of 32K-bytes expandable to 64K.

For £299 the 4K version of Model III is programmable in Tandy's Level I Basic and can be used with all Model I, Level I programs. The 16K version costs about £398 and is programmed in the Model III Basic which includes upper and lower case letters.

The desk-top business computer version has two double-density 40-track disc drives which add another 313K-bytes of storage to the 32K expandable to 48K of RAM. Facilities are available to add two more disc drives to bring the storage

capacity up to 826K-bytes to a built-in RS 232C serial interface, the version will cost about £1,000.

As the company has claimed the Model III is cheaper than Model II which is selling at about £2,500, and has the same storage capacity, Model III drive up to three 8-inch floppy discs, providing 2 megabytes storage, and its 32K-bytes RAM is expandable to 64K.

Storage

Model III Basic is a version of the Level III Basic used on Model II, but is upwards compatible with Level I Basic on the Model I.

However, it seems that Model II is closer to the PC than the Model III. The latter has 32K-bytes of user RAM on floppy discs providing either megabytes or 3 megabytes storage. Model II provides megabytes of disc storage, while the Model III supplies up to 826K-bytes on disc.

Nixdorf's LX 5000.

Multi-function translator

NIXDORF'S pocket translator, the LX 5000, available in the UK from Phone-Aids in Hampshire, can perform a variety of extra functions for nominal additions to the basic cost of £115 plus VAT.

Apart from translating into 11 languages other than English, including Arabic, for £35 plus VAT per module the terminal can communicate over the telephone to a computer.

When used with an RS232C interface for £125 plus VAT, an acoustic coupler, an RS2200, complicated program can be accessed, data can be checked, orders can be placed (as in our picture) and software can be scanned or modified.

For an extra £22 plus VAT the terminal can be used as a calculator; for an extra £86 plus VAT as a filing system; and for an extra £80 as an electronic notepad.

Semis in Brighton

THIS year's Semiconductor International exposition will be held at the Metropole Convention Centre, Brighton, on November 26-27. Technical sessions will cover packaging and defect monitoring, very large scale integrated circuits, automatic test equipment, reliability, processing, electro-optics, photo-imaging and lithography and alternatives to microprocessors.

Supporting dealers

VICE-PRESIDENT and general manager of Apple's European operation, Jon Lawrance, previously held a similar position with Intel Europe, says he intends to give the company's European dealers and distributors the full and unqualified support.

What Happens when you Systimize a VAX 11/780

It Becomes a Value for Money Systime 8000

Systime do a very hot conversion on a VAX 11/780. We call it the Systime 8000 and it gives you real value for money. You get up to 12 MB of low cost MOS memory and multiple, multi-port controllers supporting upgradeable 67 MB, 128 MB, 256 MB and 512 MB drives. The package includes a choice of either 300, 600 or 900 line per minute printers and there's a full range of DEC compatible matrix printers and VDU's. And of course, we include magnetic tape drives and communications interfaces in the deal. Take a look at our VAX-PAX special offers!

Systel unlocks the power of a VAX Systel is the powerful Systime TP system that gives your VAX far greater processing power, security, high level system management and rapid system development. Ask Systime about Systel and remember if bundled it would cost you even less!

VAX PAX1

Special Offer!

- * 1MB Main Memory
- * 2 x 67 MB storage Module Drives
- * 1 x 800/1600 45 ips tape drive
- * 16 line interface
- * 600 lpm printer
- * 10 x Syscope VDU's
- * 2 x System printers
- * VMS operating system

VAX PAX2

Special Offer!

- * 2 MB main memory
- * 2 x 256 MB storage Module Drives
- * 1 x 800/1600 45 ips tape drive
- * 32 line interface
- * 2 x 600 lpm printers
- * 24 x Syscope VDU's
- * 6 x System printers
- * VMS operating system

VAX PAX3

Special Offer!

- * 4 MB main memory
- * 4 x 256 MB storage Module Drives on two controllers
- * 2 x 800/1600 tape drives
- * 2 x 900 lpm printers
- * 40 line interface
- * 30 x Syscope VDU's
- * 6 x System printers
- * VMS operating system

16.8 million colour shades are impossible to show in a pretty coloured ad.

So here are 256 in black and white.

Available from Dicoll, AED's new full colour graphics system is more than just a terminal. It's a complete high resolution colour imaging system under microprocessor control with DMA interface available for most popular microcomputers.

Features:
- Usually only available on mainframe computers
- High speed DMA port - new image is seen
- Large refresh memory
- RS 232C interface to standard DMA interface to most microcomputers
- 256 colour palette of 16.8 million shades
- Vector and horizontal vector and circle generation plus colour curve fill
- Internal device for monitors and video equipment

PEOPLE and EVENTS

ICL opens Belfast headquarters complex

A HEADQUARTERS complex for Northern Ireland was officially opened by the chairman of ICL, Philip Chappell, and the Lord Mayor of Belfast, Alderman John Carson.

Located at Computer House, Hollywood Road in Belfast, it will cater for the ICL customer base in Northern Ireland. ICL has been in Ulster for almost 50 years, having moved from Castlereagh.

A large representative group of industrialists from across the Province was present at the opening.

New director for Logica

Brian Martin has joined the board of Logica as director, responsible for the management group. His career has involved international experience in economics, transportation and management control, and in 1980 he founded a transport consultancy.

Martin worked for the London Transport Board and then as a research engineer at MIT, studying computer based techniques for forecasting travel demand in urban areas. He was also involved in Project MAC, the world's first time sharing project.

For five years he was chief engineer, transportation, for the Greater London Council and then in 1969 founded Martin Voorhees Associates. In 1978 he became international vice-president of Alan M Voorhees Inc, co-ordinating the company's activities throughout the world.

Prize for a unique program

A CONTEST was sponsored by AFIPS during the 1980 Personal Computing Festival, when personal computing enthusiasts were asked to design unique non-commercial hardware and software applications. The winner was Trateep Amornvithachai, who selected as his prize a Houston Instrument's Plot DMP-2 digital plotter.

Amornvithachai's winning entry was a program for translating Oriental Thai into English.

Lucky number

Cashpoint, the Lloyd's Bank computer-linked cash dispenser system, now has 1.5 million cards in use. Katherine Jones, a nursing assistant from Northampton, applied for the 1.5 millionth card and was presented with a watch, a leather wallet for her card and a Lloyd's Bank trophy.

George Snelgrove has been appointed by Rediffon Computers as London Regional manager. He joined the company in 1974, and from 1978 worked as Northern Regional manager. Rediffon has also appointed a product marketing manager, Mike Burdett, promoted from his position as branch manager for the South East.

A COMPUTER terminals company has agreed to sponsor Lancashire Brass, a registered brass band from Chorley, Lancashire. Blackburn-based Terminal Display Systems has provided the band with uniforms which will give the band "an important psychological boost" according to Ian Cuthbertson, Lancashire Brass' chairman.

Prince to present Girl Technician Award

Prince Charles is to present the Girl Technician Engineer of the Year Award, at a ceremony to be held later this year.

The award is sponsored jointly by the Institution of Electrical and Electronics Engineers (IETE) and the Caroline Haslett Memorial Trust.

Chris Isger has joined Data Logic's communications products division as sales executive. He joins from Nolon Communications.

Wyn Rees is sales manager with Videcom. He was previously sales executive with ICL.

Consultancy partnership

A CONSULTANCY partnership has been formed by two UK information and database specialists, Dr Tony Kent and Derek Barlow. The consultancy is called Kent-Barlow Information Associates (KBIA).

Barlow has been director of the Institution of Electrical Engineers' Inspect database service for the past ten years. Dr Kent has led the Chemical Society's major involvement in the capture, storage and retrieval of chemical information since 1968.

Barlow said that information is "... rapidly becoming a resource and a commodity that can be traded internationally".

KBIA is in Theobalds Road, West London.

Pool

Verity Cattaneach Pool has joined Computer Resources to help with public relations. She joins from Computer Services where she published and ran the public relations department.

Barry de Labell has been engineering director of the house Star Computers. He has with Star since 1979 and before spent seven years with Amn Systems.

Mark Armitage has joined Computer Automation CSO as a consultant. He was formerly manager of M and S Computer Services.

Hans Visser has been appointed general manager by Documentation Systems. He was formerly with Honeywell.

Barrie Jeffrey has joined TIS Graphics as a sales manager for Southern and the North of England. He has worked as a salesman in the computer field for 20 years, for companies such as Wordplex, Corel Data and Autotrol.

Jim Hoare has joined Document UK as a sales executive with the Southern Region team. He was previously national accounts sales executive with Olivetti.

Tony Connor has joined program as systems analyst in the hardware services division. He is formerly data processing expert for Trafalgar Travel.

Mike Loftus is territory sales with Computer Machinery Company responsible for sales in the south, southern Greater Manchester and West Lancashire. He is previously with Deltek.

Bank promotions

The Royal Bank of Scotland has made several promotions within its head office, electronic data processing division. Norman Irvine, formerly controller, systems development, has been appointed assistant general manager. W. S. Lindsay, formerly manager, computer operations, has been appointed controller, production services. J. S. Rafferty, formerly manager, systems planning, research is controller, systems planning. James Macmillan, who was previously manager, systems, is now controller, systems development.

Roy Armstrong has been promoted to company training manager at Computer Technology, CTL. He joined the customer services division as project manager in 1978.

John Milway has been appointed UK sales manager for the commercial systems division of Computer Automation's UK operation. He was formerly Southern Region sales manager for the same division.

Chris Rigler is national sales and marketing manager for Unistat Computers. He was previously divisional marketing manager at Data Logic.

The BBC has appointed Alan Lafferty to be manager of engineering promotions. Lafferty joined the BBC in 1971. In 1978 he became engineer in the liaison section, engineering information department.

Several appointments have been made by ITT Business Systems' Sales HQ District (Brighton). David Reid takes over as executive manager. Tom Jarvis is market development manager. Peter Jackson is product marketing manager. Carl Spurr is national sales manager for ITT's loud speech equipment. Keith Goodman is national sales manager for the company's facsimile products.

Mothercare VP

Christopher Hutton has been appointed vice-president, data processing of Mothercare Stores Inc in the US. He joined Mothercare in 1968 as a trainee programmer at Westford, and transferred to the US in 1977 to head the computer department.

Howard Turnridge has joined Versatec Electronics as a senior engineer. He spent the last eight years with Honeywell.

John Cahill has been appointed director of marketing programs for General Automation. He was previously systems marketing manager for Xerox's office product division in Dallas. He will be based in Anaheim, California.

X-Data has appointed James Coupland, formerly with Hawker-Crumer as printer product specialist, and Brian Metcalfe, formerly with KPG, as sales executive.

Cambridge graduate John Youmans has joined the systems research team at Urwick Nexos. He was previously consultant engineer with Communications Studies and Planning Ltd.

ADABAS

SEMINAR
LONDON — Thursday 2 October
on

ADABAS

The Adaptable Data Base System, a dbms capable of handling relational network and hierarchical data structures, offers flexibility, ease of use and throughput/performance efficiency — with inverted and randomised access methods, full data compression and automatic recovery at transaction level.

NATURAL

ASL's on-line and batch programming language for use with data base and on-data base files. NATURAL is a unique integration of interactive transaction and report writer facilities with update/delete functions. In addition to batch programming, it provides on-line transaction development with full screen formatting and immediate debugging and execution. Application programs can be developed in a tenth of the time taken with conventional programming languages with no loss in machine performance.

Adabas Software Limited also markets and supports ADABAS-M, the Adaptable Data Base for Mini-Computers, and COM-PLATE, Software AG's d.p. monitor.

OP SPOT

Managing a small, personal set-up

RIGHTLY or wrongly, fairly or unfairly, operations staff often criticise their DP manager for failing to understand their needs and problems.

They say he's too aloof and detached. They might see him for an appraisal from time to time, or get the occasional nod when they pass on the stairs. But, all in all, operator and DP manager just don't seem to have much in common.

Such a description hardly applies to Robin Weldon — the DP manager at Eastbourne Waterworks is neither detached nor aloof.

Conscientious

"We're a small set-up. I've got an operations supervisor who has been with the company for many years and is a great help to me."

"My day starts at 8.30 in the morning when my first job is to see the operations supervisor. I tell her what should be given priority and she tells me about the other work that's on."

The site has three programmers and two female operators who work days only. Main work is billing, a batch application which runs on an NCR Century 75 system.

"Both of my operators are

girls and that has advantages and disadvantages. On the one hand, lady operators are very conscientious, while on the other they are very reluctant to work at night."

Night work

"The master file has details of about 90,000 users and a lot of updating is involved. You'd be surprised how much property gets sold and how many people move home in an area like this."

Water rate bills are sent to users every six months, a task requiring 70 hours of machine time spread over three days.

"That calls for quite a lot of night work. Kim, one of my operators, did it on one occasion and vowed 'Never again'. She was a bit frightened because this building makes a lot of strange noises at night."

Fortunately his three programmers have no qualms about working nights and so every six months they turn their hands to operating the system.

"They're very useful operators and they do a very good job for me," said Weldon.

In November or December the site will replace its NCR Century 75 with an NCR Criterion-V-8555M, running under the VRX operating system.

"The new machine will drastically speed up our throughput. At present input is via paper tape and cassette, but on the new machine we will have cassette only."

"All our existing programs will run on the new system and we won't have to carry out any conversion. We expect to phase out the old machine three months after the new one is installed."

The operators will get accustomed to the new machine by means of a course and practical, hands-on training.

"The programmers are going on a VRX migration course which will be held in London. They operate the machine while the operators attend a course in London."

Asked if the company would carry out online updating on the new system, Weldon responded with some interesting comments.

Strong views

"I'm not a great advocate of online updating. A lot of DP managers at the small to medium-size installation want the latest in software just for the sake of it and not because they really need it."

"Anyway, we're not a bank or an airline and so we don't need that sort of system. Online updating calls for very good software if it is to be safe."

Weldon also has very strong views about salesmen, particularly those of stationery and printer ribbons.

He said, "They come into reception and expect to see you at once. I insist on appointments when dealing with salesmen and the like. It's the only way."

Wide experience

"I've been in DP for 21 years and one of the things I've learnt is that at the smaller installation you have to know what is the best and buy it. Quality is cheaper in the long run."

The site orders stationery and other accessories from such "old and established" firms as Smith and Ouzman, and Tullie Neal.

"Their salesmen are good and they aren't at you all the time. If something isn't up to scratch

Robin Weldon says that Eastbourne is a fine place to work and raise children. The picture shows Eastbourne pier in the background.

they'll take it back. That's very important."

Weldon's wide experience of the industry includes nine months working at American Express in New York.

That was 12 years ago when he was involved in a feasibility study carried out with a view to bringing programs and systems back to run in this country.

"I learnt quite a lot over there, but quite honestly I don't think

much of the Americans or the way they work."

"They talk a lot of puff and don't seem to get much done. There were too many meetings — they love their meetings. The British DP professional is far superior to his American counterpart."

"Not very keen on the city of New York, he went on, "You would need nerves of steel to live there. My sister has been

over there for 18 years — she's given up and not being able to sleep at night."

"The subway is like a clockwork machine. It's a family man — a girl and a boy — his swimmer, and equal player. I think I keep fit and I give the half an hour's equal."

Hectic but enjoyable

VARIETY, interest and being kept busy — these are some of the reasons why Kim Tomlinson (left) enjoys working in a small and informal operations department.

The junior operator at Eastbourne Waterworks, Kim says that things are a "bit hectic at times", but that she would have it no other way.

A former VDU operator at the site, she commented, "I work from eight till five and there's no shift work involved. The time passes really quickly here because I always seem to have something to do."

"I fetch all my own

stationery from the shop and usually take the bus in the day. The bus is heavy, but you get used to it after a couple of months."

On the applications of the installation, she says, "Applications include analysis, stores and payroll first thing every day."

"We input by paper or cassette. Cassettes are fast because you just load the reader and leave it. A lot of party errors with tape."

Contract workers should speak up for themselves

"We don't deal with contract operators, simply because they tend to be rather unreliable. It's not uncommon for the contract operator to start a three-month contract and not turn up after the first day."

"Programmers, on the other hand, are reliable. In the vast majority of cases they will honour their contracts."

Comments from the director of a computer staff agency after I had asked why his particular agency deals in programmers and systems analysts and doesn't bother with contract operators.

He went on to give instances of staff going along to sites and leaving in anger without ever mounting a tape or disc.

"After spending a morning at a site, one character had the manager tell the operations manager that the place was a shambles and that his operators didn't have a clue about running the machine."

"The contractor walked out saying that he would find a site more worthy of his skills. He was annoyed because the site operators wouldn't let him run the system console."

My immediate response was

to defend the contract operator, and vigorously, too. I said that he puts up with all sorts of difficulties in travelling from site to site.

The contract operator, I pointed out, often has to put up with inadequate documentation and permanent staff who are sometimes hostile because he earns more than they do.

The agency man just wouldn't have it. He insisted that the contract operator is paid to do the job required by the installation. If the site wants him to mount tapes and discs and leave the main console alone, then that's what he should do.

There was a time when I would get quite annoyed when operations staff, whether permanent or contract, were criticised by operations and DP management and other members of the computer industry.

I still believe most of the criticism to be unfair, but now take the view that operations staff bring it on themselves to a certain extent by not speaking up when the opportunity presents itself.

This column is the one where operations staff can speak up for themselves. Your letters and comments are welcome on matters relating to computer operations.

Million bit credit card a possibility

CREDIT cards storing over a million bits of data in a secure, non-erasable form could become a reality following the development of laser technology and a recording material for such storage by a small California company, Drexler Technology, makers of materials for optical

panels of plastic on which a banking terminal or the like could write large quantities of information by laser.

Once recorded, data cannot be erased from the card, unlike magnetic cards, but because of its large capacity it could be continually updated for a long time. Thus it would be useful as a bank passbook or a security pass.

Data is recorded in a metal and plastic material known as Drexon, the same as the company supplies to a range of companies that are all developing optical disc storage systems.

A piece of Drexon measuring 1 1/4 in is held in the middle of a card with a transparent plastic cover over it.

Each bit is recorded by a laser melting a very small hole in the plastic, and according to Jerry Drexler, the company's founder and president, a panel that size can hold "easily" one million bits.

Interest

No terminal yet exists for use with the optical card, as Drexler does not build such equipment, but over a dozen firms have shown interest in working co-operatively to develop the necessary hardware, he says.

In addition to its permanency and far greater capacity, the optical card is much more durable than a magnetic one on which there can be no protective coating on the stripe, Drexler says.

The cost would be under 50 cents a card, he estimates. Naked-eye-readable information can also be recorded by making large patterns in addition to the binary data.

Audit trail

The fact that all previous information would remain on the card after it was updated would, for banking applications, provide a useful audit trail, Drexler feels.

For security passes and identity cards, revalidation could take place as often as desired, reducing the risk of fraud. When a card eventually filled up it would be thrown away.

As with the B920, the basic system for each consists of a system control processor, a file processor (that is, an intelligent disc controller), an instruction or applications processor and a communications processor.

Up to four more processors can be added to the B9572 and up to two more to the B9558, and

Start of five-year plan for aeronautical network

SEVERAL message switching systems have been ordered by various national agencies involved in the worldwide AFTN Aeronautical Fixed Telecommunications Network used to pass information such as flight plans, aircraft positions and weather reports between air traffic control centres.

ITT Business Systems has already supplied a system capable of handling several thousand messages a day to the West German Defence Supplies Board in Koblenz.

Based on twin General Automation 18/440 minis, the system is valued at £1,200,000 and is the tenth ITT has supplied for use in an aeronautical network out of a total of about 160 systems.

Cable and Wireless is to supply a message switching system based on Digital Equipment PDP-11s to the Department of

Civil Aviation in Jordan for operation early next year.

And Philips Telecommunications Industrie of Holland is to supply a system to the Swedish Civil Aviation Authority, based on its Aeropp II equipment, in a main office at Arlanda International Airport, near Stockholm, with Aeropp 20 switching sub-centres in Malmö, Gothenburg and Sundsvall.

Interfaced

The Swedish system will be interfaced to the World Meteorological Organisation's global network, as well as to the Nordic Public Data Network and the public telex network.

Over the next five years it is also planned to develop the system to operate as a node in the medium to high speed data network planned by the International Civil Aviation Organisation.

Burroughs extends its CP 5000 line upwards

THE new Burroughs CP 5000 line of communications processors has been extended upwards with two new models, the CP 8958 and the CP 9872, joining the existing CP 6550, launched at the beginning of the year (CW, January 24).

The models are similar in architecture to the B920, launched in the US two weeks ago (CW, August 28).

Main memory expands to 1.5 megabytes on the larger of the two new models, and 1.2 megabytes on the smaller, compared with 840K-bytes on the 6550.

As with the B920, the basic system for each consists of a system control processor, a file processor (that is, an intelligent disc controller), an instruction or applications processor and a communications processor.

Up to four more processors can be added to the B9572 and up to two more to the B9558, and

both can support up to 12 communication lines.

Communication modes supported include X25 packet-switching, IBM SNA/SDLC, Hsiao and 3780/3790, as well as Burroughs' own BNA/BDLC.

A typical CP 6558 with half a megabyte of main memory, two floppy drives, 19 megabytes on disc and four lines would cost \$30,184. A typical 9872 with 817K-bytes of main memory, six megabytes on floppy and 77 megabytes on hard disc would cost \$65,000.

Help with circuit design

A NETWORK of four computers is to be installed at British Industries to assist with integrated circuit design and testing. The master processor, a Systems 32/77 computer, will be supplied by SEL Computers, the Sutton-based subsidiary of Systems Engineering Laboratories, in a £100,000 contract.

Systems 32/77 has 32-bit parallel operation and uses a high speed asynchronous bus at 26 megabytes per second. The three support computers are expected to be 16 bit stand alone systems.

Key-to-disc boost for PAYE centres

WHILE the government agonises about what approach to take in the computerisation of PAYE records, the two Inland Revenue computer centres in Scotland and Yorkshire that have for some time been handling PAYE remittance processing are to be equipped with additional key-to-disc equipment from their existing supplier, Redifon Computers.

Redifon is to supply two of its Keycheck systems in the centre at Cumberland and three in Shilley, Yorks.

Both centres have ICL 2000s operating in batch mode, processing PAYE payments from employers. They do not maintain and update individuals' PAYE records which is the aim of the current much publicised Inland Revenue project.

Redifon's main competitor, CMC, is supplying its Sovereign key-to-disc kit to the other big Inland Revenue computer centre at East Kilbride in Scotland. Ten years ago it was the first and only centre to go live under the original scheme for putting PAYE records on to computers.

Killed

The scheme was killed by the Heath government. It would have involved about a dozen batch systems whereas the current plan calls for the online interactive updating and interrogation of PAYE records.

A few weeks ago the government decided to look again at the approach to be taken and froze the plans to implement a network linking 12 big regional centres.

Firnberg to speak on information processing

DAVID FIRNBERG, managing director of Urwick Nexos, will speak on the importance of information processing to senior management, and David Cox, systems manager of W. H. Smith, will explain how his company implemented a cost-effective and reliable data network, at the first of a series of seminars on Managing Communications to be held at the Carlton Tower Hotel, London on Thursday, September 18.

The second seminar in the series, being organised by Mills

& Allen with Communications Studies and Planning, is to follow on November 26 with speakers including British Telecom's managing director Peter Benton, and director of business systems Dr Alex Reid.

The four remaining seminars are planned for the first half of next year on themes including communicating money and network planning. The fee for each is £125.50, with a 20 per cent discount for the second and subsequent delegates, or for those attending all six seminars.

The OEM division of Burroughs has launched a series of 14-inch Winchester type fixed disc drives and a sample is pictured here. Called FD210 series, the drives are available in 20-megabyte (FD211) and 80-megabyte (FD214) capacities. They are interface compatible with Burroughs' MD122 8-megabyte dual floppy disc drive, and, like the MD122, have a micro controller to perform many of the tasks normally done by the host system.

General Robotics signs up Wilkes as UK agent

GENERAL ROBOTICS, the US company that is suing its former UK distributor, Karlin Computer Systems (CW, August 21), has appointed Wilkes Computing of Bristol as the new firm to sell its Digital Equipment LSI-11 based systems in the UK.

The two main General Robotics systems to be sold by Wilkes are Gemini, which comes with floppy disc storage, and Super Gemini which provides a 10-megabyte Winchester disc drive.

Tony Blagwood, general manager of Wilkes Computing, told Computer Weekly that Wilkes would be selling a comprehensive package of commercial software with the General Robotics hardware. The package covers order entry, stock control and accounting and is based on software from the

What's new, pussycat?

BYTECH
Computer Technology
14, Aldgate Road, London E1 1JL
Tel: 01-252 8001

What's new, pussycat? The answer is the address and the telephone number. Bytech, Suttons, 14, Aldgate Road, London E1 1JL, is the new address for all your computer needs. We've moved across town to a new bigger site, and changed our name. Some things don't change though. Like our fast friendly service for you. Our prices are still the lowest. And our three times the speed for data and stock. So if you want to buy or if you just want to know what you ought to buy, we are a way on our new number.

We'd like to prove we're the pussycat.

Choosing a computer is a question of philosophy

When it comes to the crunch it's all a question of need versus cost. Of course the easiest way is to buy a suit that's too big and then grow into it. Unfortunately it's also the most expensive way. And you always run the risk that it won't fit you properly, now or later.

This is where our philosophy comes in. A NORC computer system sets no fixed limits. It becomes what you yourself make of it. A system of hardware and software modules which can be rearranged or added to when your needs change, regardless of your initial configuration or your application.

What today is a simple system for order processing or stock accounting can be extended tomorrow to become a complex system for distributed data processing or production control. You need never take a step backwards. The equipment and programs you build up, you keep. You just add to them.

Norsk Data
17, Belfry Street
London N1 6BB
Tel: 01-278 6501

If you think our philosophy matches yours, call us - we'll be pleased to talk to you.

Pressure is growing for data comms standard

The development of manufacturer independent data networks in the Seventies seemed a natural replacement for leased line point-to-point working and proprietary system-oriented networks. In the event, progress has been much slower than expected and many data communication facilities currently being put together will bear a strong resemblance to those of a few years ago.

Slow progress can be attributed to a number of factors. First — and here the UK is a definite example — the introduction of public data network services has taken much longer than expected.

Second, other uncertainties have been present — the tariffing of PTT communications, the possibility of several data services existing separately, and requiring separate access, and long term, the possibility of further change when integrated voice/data networks are introduced.

Deterrent

Finally, in Europe the possible enforcement of regulatory control on private data networks used by more than one organisation has also been a deterrent.

Computer manufacturers have developed their own networking architectures fairly extensively over the last few years, but the take-up in Europe has been limited. The prospect, if not the reality, of manufacturer-independent networks has been a restraining factor.

During this year a number of public data networks supporting the X25 packet switching standard have opened or are scheduled to open. Euronet, the EEC sponsored network linking bibliographic centres opened officially earlier this year. This project has been a long time coming to fruition having been originally planned in 1974/75.

It is now no longer necessary to individually commission network design from scratch, and

It is now no longer necessary to individually commission network design from scratch and thus West Germany will be installing this summer a 20 node X25 network from Northern Telecom — a fast gestation period made possible by buying off-the-shelf equipment

that West Germany will be installing this summer, a 20 node X25 network from Northern Telecom — a fast gestation period made possible by buying off-the-shelf equipment.

The UK national nine node network, PSS, was due to have been opened earlier this year, but currently awaits completion of its switching software which, although based on the US Telenet system, is being developed specifically for PSS.

A nine node network is also planned in Japan for this year with the network switches

having been ordered from three different manufacturers. This has resulted in a specification of network nodes independent of any manufacturer allowing the PTT to choose between its suppliers in the same way that is planned for the System X digital telephone development in the UK.

All these networks provide an X25 virtual call service with charges based on call duration, call data volume and call set-up

pendence within part of the organisation, the whole organisation, or can send to a wider group of subscribers.

Internationally, attempts are being made to standardise on character sets and formats for message exchange and the resulting "teletex" standards will have applicability over a wide range of possible functions including communicating word processors and the developing electronic office area. UK plans for public services in this area await the production of a CCITT teletex standard.

Private

Within Europe the planned provision of public data-networks has meant a tightening up by PTTs of the introduction of new private networks. This has been noticeable in a change in attitude to Swift, the inter-bank network, and elsewhere where there is more than one organisation involved in using the network.

In the UK this has particularly affected the development of a universities network or the further development of the Science Research Council network.

There is clearly sense in a national service which shares resources across a wide user population just like any other utility.

However it is necessary for the charging formulae levied to reflect the very different requirements of that mixed user population. The result of this policy will be two very different sorts of private networks.

For single organisations, it will be possible and probably economically desirable to build their own networks.

The geographical aspects of a company's operations and the

Advantage

A potential advantage of the public network is the need to order only one line per site to the public network, rather than ordering a proliferation of private lines between sites.

In the UK, with the delay on private lines sometimes stretching to 18 months or two years, the public network would seem to offer a considerable advantage here, unless the delay in obtaining new access lines to the public network is also lengthy.

Considerable effort is being expended by the PTTs to get computer-based message services started in Canada.

A second packet-switching network has been installed which uses the same switching services as the existing network, but provides a message service designed as a direct replacement.

Messages are held at the local exchange and are accessed by terminals which may have dedicated printers attached. The system is designed for use within a single business as well as to make available inter-organizational tele-type links.

It is not clear whether the network is confined to three

Pressure for standardised data communications will continue as long as the number of terminals and computer systems purchased grows. However the major boost will still be the development of new information services.

exact nature of its business will dictate the need for a network much more than sheer size. The planning of a network also implies a high level decision on shared communications resources which will only be feasible in organisations operating in a fairly centralised fashion.

A number of networking packages now exist for such an environment, where character transfer is being handled, microprocessor switching systems such as the Case on EMS systems will be appropriate. Where the terminals and general system access is required then an X25 network will

by Andrew Hinchley

It is now possible to buy a network "off the peg," as West Germany has done. But there are uncertainties over the future development of networks. Here, Andrew Hinchley looks at some of the problems which include tariffs, several services existing together and requiring separate access, and voice/data networks.

He also sees more pressure for standards and the threat posed by regulatory control of private networks. Hinchley is a researcher in data communications at University College London.

be a possible off-the-shelf solution and in the UK there are currently at least four suppliers: Plessey, GEC Computers, Northern Telecom and Tymshare who will install X25 networks.

Good interoperability with the public network service for back-up and general access to other users should be a major benefit of this approach.

Novel designs

The other emerging network type is the local network organised for single site access. Here, the advantages of short distances with the use of private circuits has encouraged novel designs such as the shared cable of the ethernet and, in the UK, the development of the Cambridge ring which is now in use at Cambridge University, Kent University, and University College London.

These designs offer high bandwidth low cost networking where a reasonable number of processors on a single site wish to share resources. Although some of this work still remains in research labs, commercial versions of local networks will appear in the not too distant future.

Standards are obviously essential to communicating systems, and the more widely any particular standard is accepted, the greater the potential benefit.

The development of computer systems has been, and still is, plagued with a lack of standardisation in almost any area other than programming languages.

The CCITT standard X25 represented a major step forward in 1976 although as indicated earlier in this article it is only now in 1980 that the availability of X25 networks is starting to widen. Some of the flaws in its specification have

continued for some time leaving a temporary vacuum in the standards arena.

In particular there is a requirement to define the communications service provided by a connection-oriented network such as X25 in a way that could be superimposed on a variety of networks.

To fill the vacuum a UK proposal exists to define a transport service, while in the last few months the European Computer Manufacturers Association has rushed through a proposal for rather more complex transport protocol. Currently under urgent review is a resolution of transport level standardisation.

Access

Although the PTTs and defence organisations make use of a variety of media, the normal user has found difficulty in gaining access to other media.

For instance with micro-wave circuits, line-of-sight limitations mean that intermediary repeater stations need to be constructed bringing immediate problems such as planning permission quite apart from overall licensing problems on such circuits.

Radio circuits are more portable since several suppliers of radio data communication media and a number of interesting applications are under way.

Reporting tidal movements from the middle of the North Sea is one that comes to mind. The integration of radio data networks with terrestrial data networks is a topic of immediate concern to the military.

Economies

The use of satellites has been limited, not so much by regulatory issues as by the cost involved. The recent launch of a 3 metre dish at the Royal Radar Laboratory in Orford, (Suffolk, March 13) represented a step in the right direction.

It is part of a scheduled series of the OTS satellites by a variety of private organisations. Having brought down the cost of the ground station, economies in the use of the satellite itself are achieved by applying standardised channel coding algorithms. The Royal US-Norway Atlantic project is an experiment in this direction.

Pressure for standardised data communications will continue as long as the number of terminals and computer systems purchased grows. However the major boost will still be the development of new information services.

The electronic office, and the formation services such as the "have for a long time been the potential. It is clear that the really large changes will come when these technologies mature, take well into the 80s and effect.

DP's Olympics is still wide open

WHILE the standards at this year's Computastars qualifying heats have been higher than ever, the contest is still wide open with no clear leader in sight.

The Dutch dimension must add to the spice as over 250 competitors battle it out for the honours.

The final is being held at New Alexander Park Stadium, Perry Barr, Birmingham on Saturday, September 13. It starts at 10.00 am and is likely to finish at about 7.00 pm when prizes are to be presented.

The final is designed to test all-round athletic skills, not competitors' individual attributes in certain events. Organiser Gordon Cairns is keeping details of the events secret until the day.

Only 35 points separated all the finalists during this year's regional heats and there are quite a few names to watch out for.

There will also be some well known names missing.

Case's Gail May won't be there as her team failed to qualify last year, she managed to scoop up the Computer Weekly Rosebowl and the individual ladies' title for the second year running.

Strong bid

However, we can expect a strong bid for honours from both Rowntree Mackintosh's ladies' and men's teams. In the Northern heat, the ladies amassed 22 points with second placed Reckitt & Colman on 194. The men's team were placed third with 240 points behind Data Logic (268) and Compower (243).

Despite this, the sweet makers have proved that, on the day, they are capable of playing competitively, even if it is only half a point, as was Martin Rigby's margin in the men's individual events.

In the team events, Rowntree Mackintosh were not so lucky, just failing to pull off a double. The scores were so close in this

section that it was impossible to talk in terms of leaders until the last event, the steeplechase.

From London, National Provident has also shown that it can rise to the occasion. At last year's finals, it made the last 10 while obtaining a handy 23-point lead over Segas in the 1980 London qualifying heats.

In the Midlands last year there were five entries for the finals due to a tie at New Alexander Stadium. For the men they were Scicon, Data Sciences and Peterborough Data Processing. For the ladies, teams from

Smedley-HP Foods and Data Sciences took the trip to Crystal Palace.

This year not one of those finalists even made the top five places and the Midlands will be represented by Mettoy, Midland Household Stores, Safe Computing and BL Systems.

Midland Household Stores has strength in depth: this is reflected by the fact that it was second in the men's team events, first in the ladies' team events, second in the men's individual events and first in the ladies' individual events.

The bar has been confirmed and tea and coffee will also be available along with snacks.

Tickets are available in advance and cost £2 for adults and 80p for children under 14. Advance ticket holders are guaranteed covered accommodation at the stadium.

Computastars is sponsored by Computer Weekly, Computable and Wright Air Conditioning.

Two new trophies were presented to Computastars, organiser Gordon Cairns (centre) by one of the sponsors, Wright Air Conditioning. Rita Grimmett (left) hands over the UK men's team award while Paula "Blondie" (standing) places the gold, silver and bronze medals around Cairns' neck. These medals are to be presented to individual winners. Elaine Harvey (right) presents the UK ladies' team award.

ALL THE TEAMS...

BELOW are names of all competitors, which, at the time of going to press, are correct for the 1980 Computastars. They are listed by competitor number. The last named in each team is the team marshal. Any competitor whose name is asterisked is team captain.

Midland Household Stores (Nottingham): Paul Ellis, Steve Harrison, Howard Hewitt, Paul Webb, Glyn Hesketh and Damon Randall.

East BV (Amsterdam): Roel Brand, Eric Rosendaal, Peter Aalders, Adrie Wulde, John Sierlings and Willie van Ommen.

Safe Computing (Leicester): Viv Oliver, Bryan Neal, Alan de Bruyn, Donald Piffard, Stuart Murray and Jerry Mead.

British Leyland Systems (Redditch): Joe Lewis, Dave Alekx, Chris Richards, Mike Bird, Martin Williams and John Wells.

Digital Equipment BV (Utrecht): John Brown, Geoff van der Linden, Bert Jol, Jacques Broekman, Ton van Wogtom and Jaak Imhof.

(Tunbridge Wells): Dave "Gloss", Dave May, Bob Davies, Mike Parks, Roger Mulvey and Alan Scott.

Thorn EMI (Telford): Debra Howcroft, Carolyn Brice, Sarah Tibble, Elizabeth Meakin, Jill Walker and Barbara Ewers.

Legal & General Assurance Society (King's Lynn): Sue Gray, Bridget Cutler, Anne Bragg, Val Edwards, Sue Mason, Mandy Smith and Phil Mitchell.

Crediet en Effectenbank NV (Utrecht): Wilma van Montfort, Trudy Combe, Mary van der Linden, Theo Blikendaal, Tonke van der Bleszen, Herman van der Haar.

Metal Box (Worcester): Jaqui Read, Eileen Adamson, Patry Moon, Gwen Read, Hazel McCloy and Judy Taylor.

Midland Household Stores (Nottingham): Anne Hardman, Judy Armstrong, Monica Camp, Jill Hesteth, Sue Buck and Joyce Randall.

Safe Computing (Leicester): Angus Dunstan, Fiona McFie, Katherine Watson, Margaret Deering and Robert Ellis.

United Biscuits (Liverpool): Colin Spencer, Mark Coxon, Karl Mulvey, Philip Gilling, Peter King and William Mitchell.

Sweeten & Zeltlinger BV (Lisse): Piet Walraven, Rolf Bars, Arne van der Plas, Brian Liddell, John Bell and Perry Walker.

Computer Machinery Co (Hemel Hempstead): Grant Hooper, Ray Walker, George Wood, David O'Brien, Dave Carls and Malcolm Clement.

Bank, Tinsley (Plymouth): Bob McGroun, Bob Forrie, Steve Jones, Tony Donnelly, John King and Martin Houghton.

Data Process BV (Amsterdam): Jos Hofmans, Jacques van Hoorick,

Ronald Veldhuizen, Wim Meikring, Harman Hoopert, and Wolk Schelling.

Rowntree Mackintosh (York): Anne Shatto, Dawn Hamling, Jo Cartledge and Louise Francis.

Control Data BV (Rijswijk): Corrie Koel-Meyr, Els van Eden-Berkveld, Paula van Duinen, Fenneke Diepenhorst-de Hooge and Ruyd Haakmeester.

ARC Automation Services BV (Amstelveen): Gerry Moillenger, Joke Albrecht, Uriele Kröner, Karin Snijders, Tina Snijders and Loes Schalenkamp.

London Transport (Newman Street, W1): Pat Welford, Jennifer Hay, Hillary Uren, Marie Kolah, Henna and Jane Kröner.

United Biscuits (Liverpool): Lucy Baines, Lynne Holliday, Kathy Mitchell, Alison Fisher, Pauline Day and Michael Swarbrick.

Thorn EMI (Telford): Mike Allen, Fred Porter, Bob Locke, Andy Warr, Nick Childs and Fiona Russell.

Crediet en Effectenbank NV (Utrecht): Henry Heas, Ton Steurink, Harry Gulik, Bob Groenendaal, Roel de Koeij, Bert Wegge.

Segas (Croydon): Mike Allen, Fred Porter, Bob Locke, Andy Warr, Nick Childs and Fiona Russell.

Control Data BV (Rijswijk): "Gutter Nukes", John Gormer, Hans Gormer, Ton van der Plas, B. B. Blackwell (Oxford), Mike King, A. D. Smith, John Sevier, Tom Locke, John Layder, and Trina Liddell.

London Borough of Lambeth: Paul Whyte, Brian Young, Ron Smith, Ian Johnston, Geoff Clarke and Paul Thidal.

Roger Smith, Reckitt & Colman (Hall): Glynis Finerty, Judy Naylor, Kathryn Barle, Ann Sonley and Joy Hebe.

Norwich Union (Norwich): Heather Burnett, Angela Smith, Sheila Cooke, Jayne Lester and Jonathan Smith.

Segas (Croydon): Louise Cotter, Pauline Ryan, Christine Woods, Margaret Smith, Elaine Childs, Sally Dale.

Intop BV (Amsterdam): Margot van Gelsen, Doris Poynt, Blanche Schiedon, Martha de Wit, Linda Jans and Winnie Waijwijk.

Reckitt & Colman (Hall): Elaine Perryman, Libby Meakin, Yvonne Teasdale, Christine Fowler, Maggie Lilley and Sue Pettifor.

ARC Automation Services BV (Amstelveen): Rick Innes, Chris de Bont, Agria Damay, Jan Drog, Gerard Gerretsen, Ton van der Plas, Rowntree Mackintosh (York), Martin Rigby, Mike Hawtrey, Ian Gibson, John Gordon and Martin Scott.

Control Data BV (Rijswijk): "Gutter Nukes", John Gormer, Hans Gormer, Ton van der Plas, B. B. Blackwell (Oxford), Mike King, A. D. Smith, John Sevier, Tom Locke, John Layder, and Trina Liddell.

London Borough of Lambeth: Paul Whyte, Brian Young, Ron Smith, Ian Johnston, Geoff Clarke and Paul Thidal.

ARC Automation Services BV (Amstelveen): Rick Innes, Chris de Bont, Agria Damay, Jan Drog, Gerard Gerretsen, Ton van der Plas, Rowntree Mackintosh (York), Martin Rigby, Mike Hawtrey, Ian Gibson, John Gordon and Martin Scott.

Control Data BV (Rijswijk): "Gutter Nukes", John Gormer, Hans Gormer, Ton van der Plas, B. B. Blackwell (Oxford), Mike King, A. D. Smith, John Sevier, Tom Locke, John Layder, and Trina Liddell.

London Borough of Lambeth: Paul Whyte,

In a double look at the Australian computer scene, LAURA TATHAM reports from Perth, where a building society is using one of the most advanced information word processing systems of its kind in the world; and EDDIE COULTER describes how an independent research bureau has been set up in Victoria to establish means of preventing computer abuse.

How word processing doubled output 'at a stroke' Down Under

Perth by night... A city that is not waiting for the "office of tomorrow."

Photograph: West Australian Newspaper

PERTH Building Society of Western Australia is not waiting for the "office of tomorrow" to materialise. For 18 months it has successfully been using an information word processing system in which an IBM Office System 6 directly uses data generated by an IBM 370/148. The system is unique not only in Australia, where sophisticated applications are commonplace, but may well be the most advanced of its kind in the world.

Phil Carville, the Society's controller of administration services, sketched in the background history. It has long been a policy to mechanise all routine clerical tasks, he told me, and in any building society correspondence accounts for a high proportion of these.

Expanded

"In 1976, we carried out a survey in conjunction with IBM. As a result, we put in a centralised dictation system and eight IBM Magnetic Card 82 word processing machines. We trained the girls who volunteered to operate these, and got rid of 70 typewriters by selling them to the staff or putting them in branches. We kept two Selectrics, though, for work not suitable for word processing.

That move doubled productivity at a stroke, for a group of

11 girls, including a supervisor, handled work previously done by 23. Those not in word processing were retained for other work in the society.

The Perth, founded 117 years ago and now Australia's third largest building society, has expanded rapidly during the past few years. Much of this was the outcome of a boom in mineral exploitation which has brought many families to the area. Today, the suburbs of Perth, once a compact city, stretch out for up to 15 miles from the centre. The population has risen to 874,000, three-quarters of the total in a huge State that is otherwise mostly desert.

A further factor is that Australia is a nation of home owners (though most pay off their mortgages within seven years). In Perth, the figure is 67%.

Unavoidably, correspondence, both with borrowers and investors, is lengthy in content. For example, a maturity notice to a member who has made a limited-term deposit includes a personal letter with about 14 lines of body text, a deposit statement (two for joint accounts) and a foolscap-size form listing various ways in which the proceeds may be reinvested in the Society. Most days, 250 such letters go out.

A housing loan approval letter, also personal, occupies 14

foolscap pages in single line-spacing and consists of four parts. The borrower gets two, one of which he signs and returns; another goes to the solicitors with instructions to prepare the mortgage papers, and includes settlement and title details. The fourth, containing all the information, is filed. Each letter is made up of selections from a repertoire of 62 standard paragraphs. Variables in amounts and so on must be inserted into some of these. Altogether, this totals about 500 lines of text, and some 60 sets are prepared each day.

These documents and several other types were initiated during overnight mainframe processing during which the data was extracted from the appropriate files. Originally, it was listed. First thing in the morning, the print-outs went to the word processing operators for use as source data in conjunction with the IBM 82s.

It soon occurred to the society that if manual copying from computer print-outs could be eliminated, there would be another big jump in productivity. Would it be possible to establish a direct link between the IBM 370/148 mainframe (soon, incidentally, to be upgraded to a 4341) and the word processing equipment?

Experimentally, an IBM 6/450

information processor was installed. This consists of a workstation with typewriter keyboard and video display, magnetic card hopper/stacker that reads 240cps and records at 200 cps, and a diskette unit with media that store the equivalent of about 130 pages of text. A separate ink jet printer operates at a speed of up to 92 cps and automatically handles paper and envelopes. It is also designed to operate in various modes, including communication with a remote mainframe as well as with the 6/450 processor.

Options

Basis of the mainframe communication software is IBM's RSCS. Remote device Spooling Control System. This was originally designed to control a remote station with card reader-punch and line printer using 2700 protocol. In that form it was not suitable to meet all the requirements for linkage with Perth Building Society's System 6 word processing system.

Additional software (which the Society subsequently offered to IBM) was developed in-house. "We had to set a lot of options — for instance, block length and transmission speeds," explained analyst programmer Paul Johnson. "The ink jet printer could

not work directly with the data in mainframe format so we wrote an Assembler subroutine to spool card image output on to a mainframe disc.

"We also wrote programs to merge standard letters and variables and to handle upper/lower case instructions for the ink jet printer. To work out pagination — we wanted the printer to work unattended — we set up tables to keep count of the lengths of variable paragraphs and to make the printer select plain or headed pages and collate the output."

Two basic types of data are directed to the ink jet printer. One is documents, such as reports and other texts, complete with format control. This may be printed directly or stored on cards of diskette. The other is files consisting of two or more elements for later merging with a standard letter. Such files are therefore normally directed to diskette. Mainframe transmission is initiated by the 6/450 operator, usually once only, at the beginning of the day.

Arrears

The System 6 pilot scheme went live in August, 1978. It was so successful that the Society has since acquired two 6/450 workstations and two further free-standing ink jet printers.

one a dual speed model capable of 184 cps.

Today's system for preparing the maturity notices, mentioned earlier, involves the merging of client record data held on diskette with mainframe-generated financial details and variables. These are written by the mainframe on to diskettes during the night.

Data for housing loan approvals is provided at 9.30 am and 1.30 pm every day by the mainframe, which again writes the data on to diskettes.

Arrears reminders number 90 per day. They are based on variable information produced by the mainframe during the night, merged with static data on diskette.

The system is also used to input data for processing by the mainframe, via the IBM 82s software, to prepare such documents as reports, prospect manuals, and system specifications for the computer department.

All this work is handled by only two operators and a supervisor and averaged daily output is 50,000 lines. During peak periods, this may rise to 60,000.

A further nine girls and a supervisor work in the word processing department. About 150 people use the centralised dictation system and there is a repertoire of some 600 standard letters. Of these, 100 require long runs of copy to be personally addressed.

Exploited

Perth Building Society has not, as yet, exploited the word processing facilities of its Office System 6 to handle small, but useful, documents that could not, until now, be processed on the mainframe. Personnel records, for example, plus employees' names on diskette and can be processed at a time and in a way that is more flexible than the public transport and other systems, which are sorted and posted by order of name.

The mailing list of the Housing Industry Association, which Perth Building Society manages, is also maintained by word processing. It is used in conjunction with the word processing system to produce a mailing list for the Society's housing department.

Follow-up research in the area of particular industry studies, auditing techniques and the development of special techniques for small scale computers will also be pursued.

CIT-CARB hopes that by revealing a few skeletons in the cupboard, by offering perhaps to former employees who have been "fired" rather than produced, organisations can contribute to the overall picture of computer abuse.

At a time when many newspapers are switching over to computerised typesetting — and printing workers are having to learn a whole new

job — ALAN AYRISS describes how one of the country's largest independent newspaper groups, the Croydon Advertiser, converted to the new technology.

All change in the newspaper industry

AS more printing houses join the bandwagon of newspapers replacing hot-metal with computerised typesetting, what costs, benefits and problems can they expect?

The Croydon Advertiser, one of the country's largest independent groups with 10 publications circulating throughout Surrey, Kent and parts of Greater London, is a good example of how this important changeover can be implemented without too much disruption to business.

The group, now totally converted to photo-composition, had reached full capacity with hot metal and existing staff. After an investment of £400,000 on machinery and building alterations, productivity — without raising manpower levels — has increased significantly, enabling 185 pages a week to be printed with capacity to spare for future expansion.

Today's system for preparing the maturity notices, mentioned earlier, involves the merging of client record data held on diskette with mainframe-generated financial details and variables. These are written by the mainframe on to diskettes during the night.

Complex

But while costs and benefits can be summarised in a sentence, the associated problems are more complex. One of the biggest worries facing any printing house is maintaining production levels while this traumatic exercise takes place.

"Some newspapers have been forced either to cease publication for a short period or drastically reduce pages," explains Colin Lewis, group general manager of the Croydon Advertiser.

So the changeover was started at a time when printing schedules were low. From Day One the effect was marginal; within three months it was hardly noticeable, and after six months productivity was higher than it had been with hot metal.

For nearly eight months, newspapers were produced with both hot metal and photo-composition, as the new equipment was gradually installed. The system includes Data General Nova 3 computers and two Compugraphic Videocaster 9 phototypesetters, each with a 2000 character set and an annual output of 720,000 characters in 76 type sizes and 18 styles. They are fed by 18 Whitaker/Datex keyboards.

As well as training keyboard operators at the Croydon Advertiser, Charles Froggatt (right) also advised in other areas of newspaper production.

The mailing list of the Housing Industry Association, which Perth Building Society manages, is also maintained by word processing. It is used in conjunction with the word processing system to produce a mailing list for the Society's housing department.

Follow-up research in the area of particular industry studies, auditing techniques and the development of special techniques for small scale computers will also be pursued.

producing six-level punched tape.

Prior to photo-setting, the tapes go through a high-speed printer to provide printouts for proof-reading. Corrections are made by four CRT 7000 editing VDUs.

The remaining production stages involve compositors pasting up the various bromides of text, illustration and advertising to form complete pages. These are photographed, and page-negatives are exposed to light-sensitive polymer material which solidifies into a printing plate.

Unions and management consulted and co-operated fully during the changeover. The group employs about 200 people on production and for them photo-composition has meant a completely different working life with new materials, new methods, new skills and new conditions.

Full retraining was given in every area. And both Lewis and Brian Ridge, Imperial Father of the Chapel of the NGA at Croydon, agree that the retraining of keyboard operators was not only the most important requirement but it could have been the biggest of all the problems associated with changeover.

New job

"If operators had not reached the required standard, the consequences could have been disastrous," comments Lewis. "Production might have been hit to the point when the whole investment programme could have been jeopardised."

"The biggest fundamental change in our lives was the keyboard," adds Ridge. "In other areas, training can be fairly informal. But moving from Linotype to Querty machines is like learning a new job."

Both Lewis and Ridge say that the problem never surfaced because of the standard achieved by Keyboard Training Ltd, the company chosen to give in-house instruction.

One of KTL's instructors Charles Froggatt, worked full-time at the Croydon Advertiser, on normal shifts as required, until 24 keyboard operators had

been trained to the standard required to maintain production levels.

Watched by Brian Ridge (centre), Father of the Chapel for the NGA at Croydon Advertiser, keyboard training instructor Charles Froggatt gives advice to operator Lionel Wilson.

Bureau to fight computer abuse

THE concern of a number of Australian commercial organisations, user associations, and academics over the increasing dangers of computer abuse has prompted the formation of an independent research bureau to identify the types of abuse and establish means of preventing it.

Run from the Caulfield Institute of Technology in Victoria, the Computer Abuse Research Bureau (CIT-CARB) has been in existence for some 18 months and has been building a database of profiles on notified abuse in Australia and New Zealand.

Tolerance

Chaired by Kevin Fitzgerald, executive director and senior lecturer in accounting systems at the David Syme Business School, Victoria University, the executive committee of CIT-CARB includes representatives from the Institute of Accountants, the Institute of Systems Analysts and

Australian Computer Users Association.

CIT-CARB points out that because there is currently a high level of tolerance shown by the business world to computer abuse, there has so far been a low level of knowledge about it. They want to change that. And they want to include unauthorised manipulation of computer input and/or output, unauthorised access to the system, modification or use of application programs, misuse of data processing facilities, theft of equipment, misuse of equipment and unauthorised data interception.

CIT-CARB is a non-profit, national public institution set up to serve the community in both public and private sectors as a catalyst in the exchange of knowledge in the field, as a research and development centre, and as a forum for the exchange of ideas between the

operators and the controllers of computerised business systems.

The bureau is currently conducting national surveys of Australian and New Zealand computer users to profile the standards of computer use and the level and types of computer abuse. Current figures available include accounting, DR and business work in the US.

The national survey now under way involves 5,000 questionnaires and is aimed at discovering the facts in relation to one of the business world's most significant problems: how to ensure computer security.

Experiences both in Australia and overseas have shown that a serious threat to an organisation's assets have been underlined to such an extent that the very existence of the organisation has been threatened.

By guaranteeing anonymity the current CIT-CARB survey hopes that organisations will contribute to the building of both the profiles of com-

puter abuse and the level of computer auditing in Australia and New Zealand. From this knowledge it will then be possible for an organisation to develop its own risk analysis, and direct relevant resources to the maintenance of data security.

As returns from the current national survey return to the bureau, they are being entered on to a database, storing in format the database of Stanford Research Institute. This will enable CIT-CARB to expand the power of the findings by exchanging data with Stanford.

Skeletons

Follow-up research in the area of particular industry studies, auditing techniques and the development of special techniques for small scale computers will also be pursued.

CIT-CARB hopes that by revealing a few skeletons in the cupboard, by offering perhaps to former employees who have been "fired" rather than produced, organisations can contribute to the overall picture of computer abuse.

PRODUCT NEWS

Emulator package for online jobs

FROM Datapoint comes an emulator software package that permits an operator to perform online and distributed processing functions on the same terminal.

The package allows Datapoint 3870 Datastations to function as IBM 3277 Model 2 display stations and Datapoint 3601 datastations. It is called EM 3270.

The emulator is an object program that is loaded down line into the 3670 Datastation by a Datapoint 1571 distributed processor.

The Datapoint processor acts as a 3271 Model control unit and forms the interface between the mainframe and up to 16 3670s acting as 3277 display stations. Datapoint says the 3670s are also connected to the time sharing system and this means that both online and distributed

processing can be executed.

The emulator supports communications line speeds up to 9,600 baud and the Datastation is available in either 115 or 230 volts (50 to 60 Hz) models.

Datapoint says that in a typical configuration, up to 16 3670s can be connected to the mainframe via a Datapoint 1571

distributed processor acting as a cluster controller. Datapoint 3670 (four port) and 3671 (eight port) EIA hubs form the interface between the controller and the 3670s.

Ventek Ltd (CW), Station House, Harrow Road, Wembley, HA9 6ER. Tel: 01-893 6361.

Hardware development module

A HARDWARE development module for the 16-bit Z8000 microprocessor is now being supplied by SGS-ATES. Called the Z8000 DM, it complements the Z8000 SDP software development package.

It has 16K-words of RAM, expandable to 32K also 2K-words of EPROM, expandable to 8K.

The clock rate can be set to 2.5 MHz or 4 MHz by changing board links. For input/output there are 32 parallel lines and two RS 232C serial I/O ports. A wirewrap area is provided on the board. It costs £1,125 + VAT.

SGS-ATES (CW), Walton Street, Aylesbury, Buckinghamshire. Tel: 0296 6877.

Feedback Data's TCD330 cartridge deck.

Pack for linking two remote PDP-11 systems

A SOFTWARE pack that will establish a communications link between two remote Digital Equipment PDP-11 computers has been launched by Xoren Computing.

Called IPL-11, the pack enables any types of files to be transferred over a telephone line or other communications channel and incorporates CRC error checking according to CCITT recommendation V41, says Xoren.

Data transmission is asynchronous via DEC standard terminal interface cards such as DL11, DZ11 and DM11. Each computer appears to the other as a remote terminal.

Xoren says that for installations with more than one terminal, the only additional hardware normally required at each computer is a modem or acoustic coupler which can be connected to a terminal interface card in place of one of the terminals. Transmission speeds of up to 9,600 baud can be selected by the operator.

The package occupies about 6 kilowords of memory and runs under a number of DEC operating systems. The license fee for the basic version of the IPL-11 package running under RSX-11M is £480 per computer. A demonstration is available on Xoren's in-house PDP-11 machine in London at the address below.

Xoren Computing Ltd (CW), 28 Maddox Street, London, W1R 9PF. Tel: 01-629 5932.

Single card plug-in bubble memory board for TM990

A SINGLE card plug-in bubble memory board called the TM990/210, that provides up to 69K-bytes of non-volatile storage for systems using the Texas Instruments TM990 series is available from Celdis.

The maximum storage capacity of the board approaches that of a single density mini floppy disc.

The TM990/210 uses the TIB02023 92K-bit bubble memory devices which have been shown to exhibit a failure rate of 0.0001% per 1,000 hours at 50°C and at a 90% cycle level.

The board above average time of 4 milliseconds transfer rate of 100K bytes per second in either read or write mode.

Feedback OEM version TCD330

THE TCD330 cartridge deck for DC300 type tape was developed to meet back Data's own requirements in cartridge tape systems now available on the market.

It is based on the microprocessor which says it is using the versatility in configurations to match the existing circuits, making back Data is offering a deck with a standard 70-pin interface.

It also meets the EIA ISO standards, says back Data and incorporates a locking mechanism and mounted in either the horizontal or vertical planes. A control panel is also available.

Prices range from one-off orders to 100 in orders.

Feedback Data Ltd (CW), Lane, Uckfield, TN21 9LH. Tel: 0424 4222.

Facit punch to Zip range

DATA Dynamics has its Zip 20 automatic receive (ASR) terminal can be plugged straight in.

Standard RS 232C milliamperes interface is available.

Data Dynamics Ltd (CW), Data House, Springfield, Hayes, Middlesex, TW6 9TH. Tel: 01-871 8781.

Print wheels

A RANGE of 96-character print wheels in 10 styles has been launched by International Systems Applications.

Additional selection of 96-character print wheels is available for European and Chinese languages.

ISA (CW), 28-30 The Road, Bradford, West Yorkshire. Tel: 0274 36031.

Hard copy unit for VDUs

VIDEO terminals with "video out" can now be connected directly to the Tektronix 4632 hard copy unit which also offers improved copying of non-interfaced signals from sources such as the Digital Equipment VT105 terminal.

Connected via the RS170 interface, each raster line of graphic or alphanumeric information is expanded to enable copies to be produced in seconds, says Tektronix.

The 4632 can also provide copies of grey scale information with five discernible levels as standard and up to 11 optionally and can be used for medical applications. A multiplexer is also available to share the copier between up to four video terminals.

Tektronix UK Ltd (CW), PO Box 69, Harpenden, Herts. Tel: 0627 63141.

Battery backup

A BATTERY backup unit on a single board that is said to maintain power to the central processor unit and memory of a Data General Eclipse during a power failure, has been launched by the firm.

It is designed for Eclipse S/250, C/360 and M/600 systems, and a report from the US says the backup unit will support the computer for two minutes.

The unit is 7 x 27 inches and weighs 81 pounds. It mounts in the chassis next to the CPU and is wired into the CPU's bus bars. It is air cooled and requires no separate AC power.

Data General Corp (CW), 724-734 London Road, Hounslow, London, TW3 1PD. Tel: 01-572 7466.

Addressable I/O board

AN ADDRESSABLE input/output board that will accept up to 16 OPTO-22 input/output modules is available from Rapid Recall. Called the Pamux, the board is designed to interface a microcomputer to industrial plant machinery.

Rapid Recall features on-board mechanical switches, allowing each board to have an individually selectable address. This enables up to 64 boards to be multiplexed to a single microcomputer input/output port via a daisy chain cable.

The OPTO-22 optically coupled input modules are of a standard size and are plugged into the Pamux board. An LED status indicator is provided on the board for each module, and modules can be removed, and replaced without disconnecting any wiring. It costs £189.

Rapid Recall (CW), Denmark Street, High Wycombe, HP11 2ER. Tel: 0494 26371.

Sprocket-driven guillotine

THE Rowe 305 is a sprocket-driven guillotine which can cut computer print out into forms between 4 and 12 inches deep. It has adjustable margin trimmers and can be fitted with three centre cutting blades. The perforation in the stationary can be removed by strip cutting.

Performance varies between 2,000 and 6,000 forms per hour. The Rowe 405 is a sprocket-driven decollator that can separate

up to 4-part continuous computer stationery. Operating speed is variable from 0.2 to 1.3 metres per second and up to 600 fold positions can be accommodated. The 405 can also be fitted with margin trimmers.

The guillotine costs £2,795 and the decollator is priced at £1,795.

The CNK key operated switch for low to medium security applications. It is available from P. Caro & Associates.

Security switches are key operated

A RANGE of key operated switches, called the CNK series, available from P. Caro & Associates of Birmingham, are intended for low to medium security applications wherever circuitry interlocks or isolation are required.

The operating key is removable in all positions to prevent accidental or inadvertent operation.

The switch units comprise a plated steel support frame to which can be mounted a one, two or three pole toggle switch. The key is nickel plated brass and a chrome plated knurled nut is provided for clamping.

A 3/4-inch diameter hole is required for mounting, says the firm, and can be drilled on a panel up to 1/4-inch thick. An anti-rotation peg should also be provided to ensure mounting stability.

Overall dimensions, including operating key in position, are 2.255 x 1.378 x 0.76 inches.

Maintained, momentary or centre switch operations can be provided with ratings of 8 amps at 125 volts or 3 amps at 250 volts AC.

A free leaflet is available and

the key switches cost between £2.88 and £3.08.

P. Caro & Associates Ltd (CW), 2,347 Coventry Road, Birmingham, B26 3LS. Tel: 021-742 1328.

Eight channel data comms board

FROM National Semiconductor is a data communications board that can provide up to eight independently programmable RS 232C compatible channels for communications expansion on board level computers.

Designated BLC-8538, the board is based on the 2651 USART and a four channel version, BLC-8534, is also available, says Natsemi.

Under user control, each channel can have either synchronous or asynchronous transmission, has 16 software programmable baud rates up to 19,200 bits per second or external inputs, and can have special transmission functions such as SYNC insertion or SYNC search for synchronous communications.

Natsemi adds that each channel can have two maskable interrupts (one input and one output), double buffering for full duplex transmission and

individual parity error detection. The system's CPU communication with the board is via standard Intel 8080A and 8085 memory reference and input/output commands.

Natsemi also has available the interface hardware to connect the communications boards to the outside world in either a Natsemi RMC chassis or a Retma cabinet.

For an RMC chassis, the BLC-8958 4-port connector boards and the RMC-A001 back panel replacement (which holds one or two BLC-8958s) provide the 28-pin RS 232C interface. The BLC-8958-1 and the AEE-001 provide interfaces for the Retma cabinet.

The communications boards are multibus compatible and are guaranteed for one year.

National Semiconductor (UK) Ltd (CW), 361 Harpur Centre, Horne Lane, Bedford. Tel: 0234 47147.

Call priority unit needs no PO connections

A CALL priority unit that has no electrical connections with Post Office equipment and allows users to answer calls in strict rotation, has been introduced by Cole Electronics of Croydon, Surrey.

Based on a Zilog Z80 chip, it can handle up to 16 key and lamp units on one master priority indicator.

The indicator unit consists of a master electronics package, which can be placed behind or underneath the key and lamp unit KLU. Ten and 20 line versions are available and the unit is optically coupled to the KLU.

Only the first line awaiting answer is indicated by a flashing LED in the appropriate position.

Price for a master unit handling six key and lamp units is about £1,000.

Cole Electronics Ltd (CW), 106-110, Haslemere Road, Croydon, Surrey. Tel: 01-890 8507.

Single minded, double talking

You've got double the information access with one of the Plessey System 90 Terminal Systems. It links with two or more computers, of different types if needs be, at the same time - not just one.

It can give you double the use because it suits a large office or organisation and links branch office location to head office too.

System 90's powerful mini-computer lets you work independently when you want. At the double, naturally.

And it's not really surprising that the terminal displays, keyboards and

printers - tailored to your exact needs - can double your business efficiency.

You get double the expertise in System 90, with both Bunker Ramo and Plessey skills in design, manufacturing, software and communications.

It doubles up very nicely with financial transaction terminals too - for point-of-sale customer charging, customer payments, cheque verification and credit card authorisation, etc.

Twice as interested as you thought you'd be?

Then contact Plessey Data Systems at Poole for full information.

MSA (Management Science America) Limited is the UK subsidiary of Management Science America, Inc., The international market leaders in the field of financial application software. The outstanding success of the UK operation is a direct result of substantial investments in the development and enhancements of the product range, together with the high calibre of the personnel. There is absolute commitment to the direct customer support of all present and future products. The company's success to date is demonstrated by the impressive base of 'Blue Chip' customers. It is considered that their present achievements have established a pattern of product and service excellence unequalled in the industry.

It is as a result of MSA's professional marketing stance that we have been retained to recruit dedicated sales executives for the UK office.

You will currently hold a sales or management post within a commercial environment, where you are constantly involved in high-level negotiations probably at board level. You will possess an awareness of business practice and commerce together with the personal credibility and commitment that is necessary to succeed in this demanding but rewarding post. A high degree of maturity and confidence is required and it is felt unlikely therefore, that anyone below the age of 28 will possess the necessary skills. Although experience of financial systems would be an asset, it is not an essential requirement. (It is envisaged that successful candidates will reside within the geographical areas mentioned below).

Remuneration is by way of a high basic salary, negotiable guarantee, and commission structure designed to give an outstanding first year earnings package of c. £25,000 plus. A prestige company car, pension scheme, BUPA and full expenses will also be provided.

For an immediate and confidential interview, where you will be supplied with full company information, contact: Cathy Tracy on 021-236 3781 or 021-308 4908 (Evenings and Weekends)

Lecturer-Computer Software

Without sophisticated and highly reliable software, modern avionics systems, based as they are on firmware technology and digital signal processing techniques, could be neither designed nor operated.

We should know, because at Borehamwood we produce some of the most advanced avionics systems in the world.

In this, our Airborne Software Division plays a crucial role. It is also responsible for much of the training in software techniques and programming which is needed in a company such as ours.

The Division now seeks an Additional Software Lecturer to provide courses in programming techniques and microprocessor applications of our software engineers and other specialists.

Part of a small team based at Borehamwood, the main of whom we appoint will be involved in all aspects of

our training courses, from the writing of syllabuses to the delivery of lectures. Considerable practical knowledge of programming, preferably gained within an industrial environment, is prerequisite and previous experience of teaching or lecturing would be an advantage.

As a member of staff in Europe's major avionics company, the person appointed to this position may expect a highly competitive salary and other benefits commensurate with the seniority of the post. These will include relocation expenses where appropriate and, under certain circumstances, assistance with local authority housing.

For further details, please telephone or write to: Chris Hill, Marconi Avionics Limited, Euxine Way, Borehamwood, Herts. Telephone 01-953 2030 ext 3449. Please quote reference M460/43.

Xionics is engaged in the development of an advanced corporate information systems architecture. The first stage of this development is demonstrable, and has been purchased by a number of large organisations. Further stages, extending over the next 5 years, are planned, and we wish to enlarge our development team.

We are seeking experienced software programmers who can meet the challenge of state-of-the-art design and development, and who enjoy the opportunities and demands of a small company environment.

All development activities take place at our Central London premises, and attractive salaries and fringe benefits are offered.

Applicants should write, giving brief career details, to:

XIONICS LIMITED

DUMBARTON HOUSE, 88 OXFORD STREET, LONDON W1

(249)

WORCESTERSHIRE

SYSTEMS PROJECTS MANAGER AND SYSTEMS ANALYSTS

Circa £10,000 p.a. to £8,500 p.a.

Our clients, part of an international company, are a major force in retailing.

They are embarking on an exciting development programme which is based on the introduction of DATABASE and COMMUNICATIONS facilities.

Equipment is an ICL 2950 and IDMS will be installed. Additionally, major innovations will take place using MICRO-COMPUTERS for advanced POINT-OF-SALE applications.

As PROJECTS MANAGER you will have full responsibility for a team working on a variety of systems. For this post you should offer at least three years' experience in financial or warehousing or distribution applications. Managerial skills will be important.

ANALYSTS should offer a minimum of one year designing commercial systems, or slightly longer in an Analyst/Programmer role.

In either case, previous experience in the technical areas mentioned is considered essential. Necessary TRAINING will be provided.

The Company Headquarters is situated in rural Worcestershire within easy commuting distance of Birmingham. Where applicable, generous relocation expenses will be covered.

The working environment is exceptionally good and the commitment to development will create further career opportunities.

Male or female candidates should contact Patrick Convey quoting ref. no. CW 283.

System Programmers for Microcomputers

£10-15,000 p.a.

COMPANY:

We are one of the well-known EDP manufacturers in the world with more than 12,000 employees. We are profitable and expanding.

LOCATION:

For our subsidiary in West Berlin we are looking for system programmers.

JOB:

They should be experienced in data communications and networks, particularly with microcomputers in Assembler and HLL (PLM-Pascal-etc.). An additional advantage would be knowledge of Intel 8080, 8088, Zilog Z80, Z8000. Your main responsibilities will be in the development of system modules on real time equipment, e.g. 8 and 16 bit microprocessors.

TRAINING:

We will offer training in case your current programming skills are not relevant.

OFFER:

We offer an attractive salary according to experience, coverage of moving costs to West Berlin, German language training, family education facilities, medical insurance, and other excellent fringe benefits. By the way, taxes are lower than in U.K. plus additional advantages for Berlin residents.

CAREER:

We require self-sufficient and ambitious computer professionals who wish to take project responsibility. We, in turn, are offering middle term career opportunities in our subsidiaries all over Europe.

Please send your c.v. to our consultant who will treat your application as strictly confidential, or phone for further information. Interviews will be held in London.
(Ref. 586-460).

UMRCC

University of Manchester Regional Computer Centre
Director: Professor G. Black

UMRCC is a national centre providing a general service to over thirty universities in the United Kingdom. This is currently based on two Control Data 7800 computers each front ended by an ICL 1900. A CDC CYBER 170/720, accessed by over a hundred terminals, provides an interactive computing service to Manchester users.

USER SERVICES GROUP

APPLICATIONS SOFTWARE: SECTION MANAGER

Salary scale £8427 to £10484 p.a., depending upon age and experience or £10142 to £12804 for exceptional candidate, required to manage a section responsible for the acquisition and support of graphical, statistical, numerical engineering, and many other areas of software.
Ref. 188/80

PROGRAMMER

Salary scale £4402 to £6388 p.a., depending upon age and experience, required to join a team responsible for support of many packages. A special interest in graphics, statistical or engineering packages would be an advantage.
Ref. 188/80

INFORMATION AND DOCUMENTATION: ASSISTANT COMPUTER OFFICER

Salary scale £4402 to £6388 p.a., depending upon age and experience, required to work with a section which produces the manuals describing the computer services offered to our 10,000 users.
Ref. 180/80

If you would enjoy the challenge of working in a stimulating environment with the prospect of a rewarding career, send for further information and an application form (returnable by September 25, 1980) to the Registrar, University of Manchester, Oxford Road, Manchester, M13 9PL, quoting the appropriate reference.

INTERACTIVE SYSTEMS GROUP

PROGRAMMER

Salary scale £4402 to £7410 p.a. or £5052 to £8765 p.a., depending upon age and experience, required to join a team to develop and support the Cyber 170/720. Systems programming experience desirable.
Ref. 181/80

SYSTEMS GROUP

OPERATING SYSTEMS: PROGRAMMER

Salary scale £4402 to £7410 p.a. or £5052 to £8765 p.a., depending upon age and experience, required to join a team to develop and support operating systems for future NEW mainframes. Systems programming experience desirable.
Ref. 182/80

Applicants for all posts should be educated to degree standard. Benefits include a good pension scheme and generous holiday entitlement. All salary scales are currently under review.

JBA International Systems Development

Midlands Based

We have been retained by an organisation to recruit a number of computer staff to be involved in the development of a major international system. The system will become one of the cornerstones of our client's worldwide manufacturing/engineering activities during the 80's. Use of on-line, data comms. and data base is implicit in the envisaged plans. A new development team is now being formed and opportunities exist for:

Senior Systems Analyst

c. £8,500

To play an innovative role in the development of one of the sub-systems which will make up the total project. The need to undertake some international travel is likely to be a feature of the work. Applicants should have at least 4 years computing experience including a period in programming preferably in an IBM environment with the main emphasis on systems design and development.

Systems Analysts

c. £7,500

These jobs will appeal to people with slightly less experience than relevant to the Senior Systems positions but who, nevertheless, have the potential to aspire to a senior level within a reasonable period. Applicants should have at least 2 years computing experience either at the programming or systems level.

Programmers

c. £6,500

Applicants should have at least 12 months experience of COBOL in an IBM main frame installation and have the desire to work on the development of applications programs in an IMS/DL/I environment.

Normal large company benefits will apply to these positions including paid overtime. Relocation expenses are also available where appropriate. If you wish to apply or require further information please contact:

By Stevens

OXFORD UNIVERSITY COMPUTING SERVICE

The Service runs a large ICL 2980 system with extensive communications and graphical equipment. It is currently planning expansion to its existing facilities and to local and remote network connections. The work is interesting and varied and conditions amenable. The Service requires a:

SYSTEMS PROGRAMMER

to work on the maintenance and development of the VME/B operating system. Previous experience of VME/B is desirable but not essential. The salary will be on the University Research Staff scales 18/1A/1J, £6,402-£10,484 per annum (under review). The initial appointment will be on the scale appropriate to age and experience. Further details and application forms may be obtained from: The Director's Secretary, Oxford University Computing Service, 19 Gypsy Road, Oxford OX2 0NN. Telephone: (01865) 58721. Closing date for applications: 18 September, 1980.

COMPUTER -- TRAIN IN U.S.A.

CUSTOMER ENGINEERS £7,500 + Car + ...

One of our top management people have asked us to find the best young engineers for London/Heathrow to be trained up on their complete product range (including trips to U.S.A. and Europe). If you have an electronics background (not necessarily computer) and are looking for variety, customer contact, problem solving and promotion, then check these benefits: Salary £7,500 + 10% bonus + 10% overtime + 10% holiday pay + 10% pension + 10% travel + 10% insurance + 10% ...

A. B. EXECUTIVE (KINGSTON) LTD
01-549 6441

SYSTEMS PROFESSIONAL

The Daresbury Laboratory, located in the Cheshire countryside, is developing major national facilities for research into atomic, molecular and biological sciences, nuclear physics and computational science.

The Laboratory, which operates an extensive network of computers, ranging from PDP-11 and Perkin-Elmer (Interdata) mini-computers to a large IBM 370/185 and CRAY-1, is looking for an experienced

SYSTEMS PROGRAMMER

to join the Accelerator Control Group of the Nuclear Structure Facility Division.

The successful applicant will help solve the theoretical and practical problems associated with the development of a network of Perkin-Elmer 16 and 32 bit computers vital for the control of the world's largest Van de Graaf accelerator. The Group is concerned with the design and development of the hardware and the system and application software using advanced techniques to provide an adaptable system readily accessible to physicists and engineers.

Appointment will be made at Senior Scientific Officer grade, on the salary scale £6,332 to £8,705 per annum (under review). Applicants, of either sex, should possess a good Honours Degree in a relevant Science or Engineering discipline, plus at least four years relevant post graduate experience. Enthusiasm and ability to work with others is essential.

There is a non-contributory superannuation scheme, a flexible working hours scheme and a generous leave allowance.

CLOSING DATE: 2nd October 1980

Please write, or telephone Warrington (0925) 65000, Ext. 467, for an application form quoting reference DL/751/CW to —

The Personnel Officer
DARESBUURY LABORATORY
Science Research Council
Daresbury, Warrington WA4 4AD

Project Leader

We are about to upgrade to a new main-frame which will employ:

- Large Fixed Discs
- Database Software
- Local and Remote Terminals
- Advanced Operating and TP Systems

We require urgently a Project Leader, preferably with experience of one or more of the above environments. Experience in Accounting and Stock Control in the retail trade would be especially welcome.

The Project Leader will report direct to the Systems Manager and will be expected to display a considerable degree of personal commitment and initiative. The coming years will offer an exciting challenge to an experienced professional who has already implemented more than one major project.

We offer a salary of £10,000 per annum. The modern Computer Centre is situated in one of the most beautiful areas in the country. Generous re-location expenses will be offered where appropriate, as well as other first class benefits and an above average flexible pension scheme with free life insurance. Please write or telephone:

DATAPoint PROGRAMMERS

Required for interesting work with top salaries

\$20,000-\$30,000 in the

U.S.A.

Have you thought of working in America? — But never done anything about it because you've been worried about.

The Cost of Living? — Accommodation? — What to do with your house in the UK? — Schooling for the children? — National Health (or lack of it)? — Visa Applications? — Tax? — etc, etc.

ACS INTERNATIONAL SYSTEMS INC. have been sending their staff to America for 6 years, and after transferring over 150 people from the UK we reckon we've met and solved very nearly every problem there is!

ACSIS will take very special care of you, your wife and family and look after all the organisational problems involved with moving abroad.

ACSIS will pay you FULL U.S. SALARIES with THE MOST COMPREHENSIVE MEDICAL INSURANCE SCHEME AVAILABLE to work as Consultants on site with our clients — we don't believe in cheap British "Slave Labour."

ACSIS offer full re-location expenses, organise flights, baggage, and accommodation for you and your family.

• ACSIS have 60 people (some married with children) currently working in the USA so you'll not lack for friends — the social life enjoyed by ACSIS consultancy staff is second to none!

• If, despite the care and attention lavished upon you by our staff, you still don't like the USA, we'll fly you back to the UK after only 6 MONTHS. So you can carry on your career over here with the minimum of interruption.

In return for this initial 6 month's commitment ACSIS offer PROGRAMMERS AND ANALYSTS the opportunity to gain valuable in-depth experience in Banking/Financial Installations which use all the most up-to-date Database, On-Line and Communications Equipment.

Expense-paid interviews in London during the second week of September 1980 — send your resumé to IAN COX or telephone him on 01-272 6426 (day) or 01-272 2794 (evenings and weekends).

SENIOR SYSTEMS PROGRAMMER

180FOR OS/VS1 TO MVS CONVERSION
£10,000 P.A. + OUTSTANDING BENEFITS

A major city institution close to main line and tube stations requires a SYSTEMS PROGRAMMER to become the right-hand man to the Systems Programming Manager. The successful applicant will be responsible for a team of seven systems programmers working on an OS/VS1 to MVS conversion project on an IBM 3031 (3380 on order).

In addition to the above salary our client offers:

- ★ Full paid season tickets
- ★ Free BUPA
- ★ Flexitime
- ★ 4 weeks' annual holiday
- ★ Non-contributory pension scheme
- ★ Subsidised meals
- ★ Comfortable, air-conditioned offices

If you have approximately 2 years' systems programming experience call Ian Cox on 01-278 6426 (day) or 01-272 2794 (eves and weekends) or write to him at the address below quoting ref: CW 4/9.

IBM EXPERIENCE

MIDLANDS

£7,000-£9,500 PLUS

Our client, a long established Midlands consultancy wish to recruit further professional staff at all levels.

The opportunities merit strong consideration, as the organisation can offer a real career challenge, allowing individuals scope and variety. The company is of long standing, stable and carefully managed. They are embarking on a well planned expansion, particularly on the 8100 and 4300 ranges and so seek additional staff with IBM experience.

The various roles include programming, principally in PL/I and COBOL, systems design, project management and consultancy, working with experienced colleagues, and provide opportunities for personal advancement.

Experience of CICS, DL/I, IMS, DMS or COPICS would be of particular interest, but is not essential.

The company has a friendly personal approach to clients and staff alike, and has generated an active social life. Benefits such as six monthly salary reviews and bonus, pension and sickness schemes, 5 weeks holiday, motor allowance and expenses are attractive.

If you can offer IBM experience, and would like a confidential discussion, contact Mike Hession ref CW 280.

MARCOL

Have you a mind for Software development?

New Centres at BELFAST & NEWCASTLE give you the chance to specialise

British Telecom, formerly Post Office Telecommunications, is heavily committed to the design, development and installation of computer-controlled telecommunication systems. To keep us among the world's leaders we are expanding our advanced research and development programme. Software design is a vital element in this programme. Hence the two new Systems Software Engineering Centres are establishing right now in Belfast and Newcastle-upon-Tyne.

For graduates with the right qualifications, these Centres will provide exciting opportunities. You will specialise in the development and support of system software for a variety of telecommunication engineering projects such as System X, the revolutionary all-electronic, stored program controlled digital switching system; paging control equipment of the nationwide radiopaging service and microprocessor applications using a British Telecom designed universal development system.

The work will be software engineering in a very real sense; programming in CORAL and CHILL — the powerful international high level language developed specifically for telephone

applications — and the use of formal design and specification methods implemented on modern hardware.

To apply you should have a good degree in computer science, computer engineering, electronic engineering or other relevant science or engineering discipline with appropriate computer specialisation. We are also interested in graduates with higher degrees and/or 1-3 years experience in system software development.

Starting salaries: Up to £7,785 if you are under 26, more if you are older. After 2 years you could be on a scale from £9,782 to £12,549. There are good career prospects with promotion to higher posts within the organisation.

To speak to an engineer about these vacancies, telephone Ken Clements on 01-357 2807 (reversing the charge). For an application form, write to: Telecom Management Recruitment Centre (Ref. CW/4/9) FREEPOST, London WC1E 6BR (no stamp required). Or telephone Frelson 2238, obtainable through the operator.

Team Leaders

£7526 - £8940

A true groundfloor opportunity, where you can develop your future too.

* lead your own team * develop entire new systems
* manage your own projects * your next step up - senior management

Although the Post Office organisation as a whole is one of the biggest computer users in Europe - it has over 40 computers of its own, set up in centres throughout the country - the development of computer systems within the Postal Business is still comparatively on a small scale.

However we have committed ourselves to an accelerated and wide ranging programme of mechanisation and automation which could lead to rapid computerisation in every appropriate area of the Postal Business.

Hence, we can now offer several very attractive openings at Team Leader level, and all in Central London.

What you can expect.

Project work at its best. You will manage projects from feasibility studies through development planning, systems design, equipment purchase and system assembly to programming and subsequent implementation and operation.

Your experience widened. Working with our spread of installations - NCR, Burroughs, Honeywell, Olivetti and others - can only strengthen your professional background and expertise.

A chance to break new ground. You will help to create systems for new areas of computer applications.

What we ask for.

As an experienced programmer and/or systems analyst you must have at least 3 years experience, preferably in the mini computer/distributed computing field with COBOL background. You must enjoy working in a flexible environment, and relish the chance to develop your existing expertise and acquire new techniques. You must show yourself capable of motivating and guiding others. You should have a degree or equivalent qualification. Although based in London some travel will be involved.

Starting salary from £7,526 to £8,940 (currently under review) depending on experience rising to a maximum of £8,940. Excellent prospects - first promotion may well put you into senior management grades leading to salaries in excess of £10,000 p.a. All salaries include London Weighting Allowances.

For further information ring Charles Liprot on 01-432 5072. For an application form, write to: Mrs. F. Dillon, Postal Management Recruitment Centre, Ref: PP6.1, Room 339, Postal Headquarters, St. Martins-le-Grand, LONDON, EC1A 1HQ.

A Member of the OPS Group of Companies

Recruitment LOGISTIX In Informatics

IBM Applications Programmers

Germany: Salary to £17K

A leading multi-national with Data Centres in several E.E.C. countries is seeking IBM oriented Applications Programmers for its recently upgraded 4341 installations. Candidates should have current programming experience in a DL-1, Assembler or COBOL environment and have participated in the program development of an on-line real-time system. Of particular interest will

be those who have worked under CICS, ENVRON or SHADOW since the Company plans to implement a SNA network in 1981. These positions represent an outstanding opportunity for career-minded individuals to enhance their technical skills whilst participating in a financially rewarding society.

Ref: L/36/A

Software Systems Development

Gtr. London Suburbs: Salary to £12K

A leading Systems Supplier situated on the rural outskirts of London has requested LOGISTIX to identify and recruit the following personnel:

PROGRAMMERS/DESIGNERS: Suitable candidates should have a degree in a numerate subject and practical programming experience in either Assembler or Coral 66. Our client's in-house training programme will enhance your programming skills and develop your applications knowledge. You will work as a member of a small team designing, coding and testing real time applications software to meet in-house user specifications. PROJECT LEADERS/MANAGERS: Candidates with proven ability as a Software Engineer or Designer in real-time applica-

tions are sought for Project Leader and Project Manager positions. It is particularly advantageous to have had experience in a similar role and to be conversant with resource management tools and user interfaces. However, candidates with the necessary software expertise and a real desire to combine innovative technical skills with a career in management will certainly appeal to our client.

THE BENEFITS: In addition to a superior salary our clients offer a comprehensive range of ancillary benefits, including relocation/legal expenses, temporary accommodation allowance, pension scheme, and health/medical facilities.

Ref: L/36/B

Banking Systems Specialists

S.E. Asia: PKG. to £20K

One of the most dynamic business environments in the World has recently witnessed the creation of a Systems and Software Consultancy specialising in financial applications. The Company urgently requires Consultants, Analysts and Designers to assist on a long-term, government-sponsored financial project. Not less than 5 years' exposure to on-line Banking or financially-oriented systems is required for all positions. Consultants should, additionally, be able to demonstrate supervisory experience gained during the

development of at least one medium to large computer system. Familiarity with SNA and DB concepts is essential. Preference will be given to applicants for the Analyst/Designer vacancies who have had a substantial programming background in either COBOL or, preferably, APL. Such challenging positions are, naturally, well rewarded, with relocation costs, accommodation allowance and a substantial basic salary combining to present a very attractive package.

Ref: L/36/C

Oil & Exploration Systems

Central London: Salary to £12K

A "household name" Company participating in oil production and exploration activities on a global basis seeks additional project team members for its Central London installation. The Company currently runs IBM mainframes with non-homogenous multi-computers in an on-line stand-alone capacity. Applications Programmers and Systems Analysts should offer commercial experience in a T.P. or DBMS environment. More important than specific programming languages used are

the applications areas in which candidates have previously worked. Programmers and Analysts will be considered to have relevant skills if they have programmed or designed in the areas of: Sales forecasting, budgetary applications, seismic and cartographic data analysis, production and materials control and spare parts order scheduling. Salaries and fringe benefits are exemplary and will appeal to career oriented professionals.

Ref: L/36/D

Office Automation

Greater London: Salary to £10K

A market leader in the areas of office automation and information science technology has an urgent requirement for Systems Programmers with particular emphasis on word processing, text and word processing. Those who have developed a mini-computer or micro-processor operating system or who have had recent

experience in SNA will certainly be attractive to our client. You will work as a member of a small project team developing State-of-the-Art Software with particular emphasis on word processing, text and word processing. As well as excellent career prospects your financial benefits will exceed those paid by most other comparable companies.

**PROGRAMMERS**

Surrey — Middle East to £9,000 + overseas allowances

The Company.

A leading international services organisation which has proved itself to be an industry leader in the fields of computing, communications, electronics and management science. As a group they carry out work for clients in the public sector and on the commercial side, clients come from such sectors as finance, manufacturing, retail and distribution.

The Candidates.

We invite applications from ambitious programmers with up to 2 years' IBM COBOL or PL/I experience, who can demonstrate substantial achievement in fulfilling end user requirements in a commercial environment. A knowledge of IMS, Mark IV and DOS/VS would be a distinct advantage.

Travel and Benefits.

Immediate opportunities exist for foreign travel. In particular short assignments of up to 6 months in the Middle East. Rewards are excellent and the attractive salaries will be commensurate with experience. The benefit package includes generous overseas allowances, free life insurance and private medical cover. Contact: Margaret Stevens

Senior Analyst/Programmers

London & Luxembourg £10,000+ Overseas Allowances

Our client, a Swiss management consultancy with offices in Zurich, Frankfurt and Luxembourg and specialising in banking and financial systems, wish to recruit professionals to take responsibility for particular areas of a large project.

The position will initially involve a 12 month period in Luxembourg as a senior member of a project team, designing, programming and implementing a Foreign Exchange dealing system, before returning to the U.K. to become a member of the London staff.

Three years experience of PDP11/34 operating under RSTS/E and programming in BASIC+ and preferably knowledge of financial applications are the main qualifications.

Whilst abroad you will enjoy free accommodation and a daily overseas allowance as well as the excellent basic salary and benefits.

Contact: Brian Postles

Analyst/Programmers

£10,000

City

Opportunities exist to join the financial world with this well established commodity broker, who are currently recruiting their own data processing team to take over from the software house who have just completed implementation of a PDP11 network. At least three years in computing with an in-depth knowledge of DEC hardware and financial applications would be ideal, but consideration will be given to high calibre candidates with a good commercial background, encompassing the development of one major accounting system.

The company offer good prospects and salaries coupled with substantial fringe benefits.

Contact: Janet Chivers

Senior Systems Analysts

To £10,000

This is an excellent opportunity to join a rapidly expanding international organisation, operating in oil field services. The company is just embarking on an eighteen month plan to decentralise its data processing and to re-develop all its systems on large IBM System 34 machines.

Applicants must be well educated and should possess at least three years systems analysis experience, ideally gained in a financial environment. The ability to plan and control projects together with a background in business systems development would be a definite advantage.

These openings are London based but there will be opportunities to travel internationally.

Contact: Isobel Bruce

Senior Analyst/Programmer

neg. £8,000 — £10,000

London

A major international accounting and management consultancy organisation has recently installed a VAX 11/780. A Senior Analyst/Programmer is required to join their small systems and programming department. Candidates will have a good basic computing background, with about 5 years systems and programming experience gained in a COBOL environment. Experience of DEC hardware software is desirable but more important is a professional and independent approach to systems development. The Company offers first class working conditions, excellent fringe company benefits and genuine career possibilities.

Contact: Jim Baker

Programmers —**Software/Applications**

to £9,000

Surrey

Our client is one of Europe's leading consultancies in computing and communications. A major new growth area within the company is its IBM project development and technical consultancy services.

This work will be based in new offices in a country house in Surrey. The site provides an exceptionally attractive working environment and will appeal to those who prefer a rural setting for creative work.

Applications are sought from systems and applications programmers with experience in IBM operating systems, communications, COBOL and Assembly level programming. An attractive remuneration package is offered and opportunities exist for overseas travel.

Contact: Margaret Stevens

COBOL Programmer

up to £8,000

Berks

A small but expanding systems house has an immediate vacancy for an experienced COBOL Programmer to work on the development of a microcomputer timesheet system. Applicants must have at least two years COBOL experience, preferably on ICLs. Other languages, such as BASIC, would be an advantage.

SPECIALIST RECRUITMENT CONSULTANTS

Operations Manager

new IBM 4331

Surrey (full relocation)

Five Figure Salary

You are probably already at operations supervisor/chief operator level - awaiting the rare opportunity to control your own installation. Certainly your experience will include:

- Substantial IBM mainframe involvement.
- The running of a Real Time Data Network.
- Demonstrable management capability.
- Liaison and negotiation with equipment and consumables vendors.
- Recruitment of operations personnel.

As part of a highly successful European manufacturing and distribution group, our new integrated data processing policy has resulted in a substantially increased commitment to computerised systems. In the UK this means an IBM 4331 (arriving soon) with a communications network and database facilities.

Our challenge to you is

- to assist in the planning and installation of the total configuration.
- to define user and operational procedures and standards.
- to recruit, lead and motivate an operations team.
- to provide an effective service to operating units across the UK.

This position is critical to the efficient growth of our organisation, and the successful incumbent can expect early recognition from senior management.

In the first instance contact our Advising Consultant, David Scarlett on 01-935 0671 (evenings and weekends) 01-540 2500.

Consultants, Analysts, Programmers

grow with the company that's growing the fastest

CMG are the largest independent computer services company in Western Europe and are expanding at a tremendous rate. All seven subsidiaries operating within the UK are continually producing opportunities for people with at least 3 years practical experience of systems and programming and a real commitment to their profession.

We are looking for people whose prime interest is in developing systems and solving business problems. Programming, systems work and consultancy are not separated as far as job functions are concerned but the particular skill of each person is used to the full.

There are exceptional opportunities to develop your career. Our standards are high but the rewards more than meet the challenge.

Salaries and benefits are the best in the business and designed to ensure we keep you once you've joined. They include:-

- ★ Salary £7,000 - £14,000
- ★ Profit share
- ★ Share purchase scheme
- ★ Free medical insurance, life assurance and pension
- ★ Influence in Company policy

We currently have vacancies in Greenford but you could find yourself working for clients nationwide.

NIGERIA

Our client is developing on-line systems in COBOL, initially using NCR 8200 series computers.

Successful candidates will be based in Lagos (with free accommodation and medical care) but will have occasional visits to other locations. Posts are offered on a renewable 1 year contract.

SENIOR SYSTEMS ANALYST/DESIGNER
to £23,000

ANALYST PROGRAMMER
to £20,000

In-depth experience is required for both posts and preference will be given to graduates.

To apply or for further details, please contact:

John Tattersall, U.I.M.C., St. Bridget's House, Brideswell Place, London EC4P 4BP.

Telephone 01-822 5774/5363

SAUDI ARABIA

£16,000-£25,000 p.a. TAX FREE

We are presently seeking a large number of qualified personnel in the following categories:

COMPUTER SOFTWARE DESIGN PERSONNEL, Ref. 101
2 year experience on computer software design. Experienced in machine code and assembly level programming.

SENIOR SYSTEMS PROGRAMMERS, Ref. 136/139
Experience of assembly language SMP, AMS, MVS installation and maintenance and JES2 internals.

EDP PLANNERS, Ref. 140
To develop long range plan and evaluate software quality and performance IBM systems experience.

EDP TRAINERS, Ref. 141
Training emphasis on JCL, TSO usage, also MS/VS, Mark IV PC1.

EDP TECHNICAL WRITERS, Ref. 142
Experience of IBM large systems environment.

These positions offer free accommodation, excellent salaries and benefits.

Call 01-958 0111 quoting reference no or write to

130 Athens House, Mill Hill Broadway, London NW7 3TD (2675)

Technical Support Group

ANALYST/PROGRAMMERS
£7600

We require two Analysts/Programmers to join our expanding Technical Support Group. This Group is responsible for Data Base, Systems Software and Technical Assistance supporting our Systems Development Groups and Operations.

The main computer systems supported comprise IBM-370/148 running DOS/VS and an IBM 4331 running VM/370. Plans are being finalised to convert the DOS/VS system to DOS/VSE on a 4 megabyte IBM 4341.

Candidates should have at least 2 years' experience of using COBOL under DOS/VS. In addition some analytical experience and exposure to DB/DC Software, preferably TOTAL and Environ/1, would be desirable.

We can offer excellent working conditions, flexible hours, subsidised staff restaurant and 22 days holiday per annum.

Please apply to:
Personnel Officer
Berec Group Limited
Berec House
1288 High Road
Whitstone
London N20
Telephone: 01-448 1313 (2684)

*CHAMPS PROGRAMMERS

up to £7500

Marcol's Hotel Systems Division now needs additional programmers to help increase the exciting growth that they have achieved in the U.K. and in Europe.

A minimum of 2 years programming experience (preferably MUMPS) on real time minis is required. We offer a new language, a variety of hardware and a range of applications.

Apart from the excellent salary we provide a structured career path, equity participation and a full range of top-class company benefits.

*CHAMPS Computerised Hotel Accounting and Management Processing System.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of

PROGRAMMER

In the University Computing Service. The successful candidate will post in the field of microprocessors and their application to various problems in the University. Although much of the microprocessor programming will be in the appropriate assembly language the successful candidate should have considerable experience in the assembly language of the 8080. Candidates without experience of assembly language programming will be considered, if they have experience of a high-level language such as Pascal, Algol, Algol 68 or Fortran. Appointment will be on Grade 12 or 13 of the University Staff Scale. Salary range £4,000-£5,700 p.a.

Applications (two copies only, including the names and addresses of three referees) should be sent to the Registrar and Secretary, The University, Sheffield, S10 2TN. They should be accompanied by a curriculum vitae and a recent passport photograph. The closing date for applications is 15 September 1980. (2689)

APPOINTMENTS IN IRELAND

Shortage of skilled personnel in Eire's booming electronics

DESPITE the dark economic clouds hanging over Europe these days, there is one particularly bright star in the sky as far as Ireland is concerned, and that is the booming development in its electronics industry. The outlook for employment is buoyant and the only restricting factor is a shortage of highly skilled and experienced people.

During the past three years Ireland has been experiencing a spectacular growth of activity in the computer and electronics field. This has been due mainly to the setting up of industries here by foreign manufacturers; also, the availability, at relatively low cost, of an increasingly wide range of computer facilities, particularly microprocessors, and the recognition, in continental Europe especially, that we have people in Ireland who could be developed technically for the production of high class computer software.

Because of the efforts of

the Irish semi-state body, the Industrial Development Authority (IDA), a number of the top 100 US electronics firms are already established in Ireland.

These include General Electric, Digital, Westinghouse, Memorex, Varian, Beckman, Amdahl, Leeds & Northrup, Data Products, Data 100, Bell & Howell, and several recent additions are:

Prime Computer Inc has set up a subsidiary in Dublin (Prime Computer Ireland) for the manufacture of minicomputer systems. Employment in due course will be almost 300.

Wang Laboratories is setting up in Limerick to produce computer systems, word processing systems and related peripheral devices. Employment will reach 1,600 when fully developed.

Amdahl, already established in Dublin for two years, has announced plans to double employment there to 400, bringing total investment in plant and equip-

ment to £8.3m. One-third of the additional 200 jobs will be filled by highly skilled and professional staff.

The increase in job approvals by IDA electronic projects rose from 1,600 in 1976 to almost 9,000 in 1979, with a capital investment of £141.2m. In 1976 electronics accounted for 8.9% of total job approvals; in 1979 it was more than 20%. It is forecast that employment in the electronic manufacturing sector will more than double within the next five years, and will be one-third of all new jobs created during that period.

Sophisticated

While currently most of the electronics manufacturing activity in Ireland is effectively assembly and component work, it is becoming increasingly recognised that this base of technical experience can and must be used for the development within the country of more sophisticated electronic and allied products.

There is plenty of scope for the exercise of entrepreneurial skills. One instance is the opportunity to set up computer software houses. Some firms have already seen the advantages to be gained from locating research and software development bases in Ireland: the availability of suitable manpower (subject to adequate training), competitive salary levels by Continental standards, and excellent government aided export facilities. Ireland has a growth rate in computer services double that of Western Europe and the potential is virtually unlimited.

Euroco International, Turnkey Systems Inc and Doonex are recent examples of such enterprise in the software field. These three companies alone will provide 171 jobs, of which 146 will be for skilled people. There are at present 90 foreign companies in the Irish electronics industry, employing 11,500 people. It is estimated that by 1985

by Sean Bedford

Sean Bedford was born in Dublin and has spent 40 years in the Irish public service, mainly with the Irish Revenue Commissioners where he was collector general of taxes for 17 years until March this year, when he joined IMPC Ireland. As Collector-General of Taxes he was responsible for the designing and implementation of an integrated computer system to automate the administrative structure, and he established a Revenue Computer Centre. He is senior consultant, special projects for IMPC Ireland, providing advice in the computer and related fields.

this total will have increased to 25/30,000, with an associated output valued at £1,250m, and that over one-third of this labour force will be in the professional/skilled categories.

There is a current identifiable demand for at least 200 computer programmers a year over the next three years and there is a chronic shortage of programmer technicians, according to the Confederation of Irish Industries.

At present there are not enough people in Ireland with the necessary training and matching experience to meet the technical demand, especially at systems analyst, programmer, electronic engineer and technician level.

An influx of skilled personnel, including in particular expatriates, would help to bridge the gap until the momentum of development would result in the catching up of experience with training in home-produced technical staff for the electronics industry. There are, therefore, many attractive job opportunities in the computer and

electronics industry at present available for those who might find Ireland an attractive place to work.

The attractions are quite worthwhile. Firstly the remuneration available for skilled computer people is conservatively regarded as more than favourable when compared with similar levels in the UK.

There is ample scope for personal career development in this expanding sector of the Irish economy, and this is probably the most opportune time to get in on the ground floor.

The environment is pleasant and has a great deal to offer to family people. Many of the enterprises are sited in towns with picturesque hinterlands, such as Cork and Galway. Most are in close proximity to universities or regional technological colleges.

Relocation grants are available through the Irish National Manpower Services which help to minimise the cost of moving to Ireland.

Elm for a microelectronic research centre in University College, Cork, and the establishment in the National Institute of Higher Education in Limerick of a centre to investigate the application of integrated circuits.

The availability of highly trained personnel is central to the development of electronics in Ireland.

At present there are not enough people in Ireland with the necessary training and matching experience to meet the technical demand, especially at systems analyst, programmer, electronic engineer and technician level.

An influx of skilled personnel, including in particular expatriates, would help to bridge the gap until the momentum of development would result in the catching up of experience with training in home-produced technical staff for the electronics industry. There are, therefore, many attractive job opportunities in the computer and

IRISH RECRUITMENT

Digital Equipment International is a world leader in the mini-computer field, currently employing 1,200 people in Ireland at our Dublin, Galway and Clonmel locations. Our Clonmel operation will expand from the present 48,000 sq. ft. to a 150,000 sq. ft. facility by 1982. To help support this growth we require the following:

SOFTWARE ENGINEER

We require a Software Engineer to develop and maintain the Software on our many computer controlled pieces of manufacturing/least equipment. Also, to find and correct diagnostic problems arising during the production of our CPUs. Applicants should have a degree and several years Software experience.

PROGRAMMER/ANALYST

This job involves both systems analysis and programming activities. Interface with a variety of systems will be required but predominantly in the areas of manufacturing and material systems. We require a person with a minimum of 2 years Cobol programming and a broad experience of systems analysis who has the ability to grow in this environment.

We are looking for self-motivated people who enjoy challenging work, like dealing with people and who are looking for a job with a broad perspective.

Salary and conditions of employment are excellent and a very generous relocation allowance is payable. We also operate a pension scheme and a health insurance scheme for you and your family and first class opportunities for career development exist within the corporation, both in Europe and the U.S.

If you satisfy the above criteria and you are interested in joining a company that offers outstanding opportunities, wide ranging development and growth then we are anxious to talk to you. Interested applicants should write, including a telephone number where you can be contacted, or phone for an application form to:

Mike Gullfoyle, Personnel Department,
DIGITAL EQUIPMENT INTERNATIONAL LIMITED,
Waterford Road, Clonmel, Co. Tipperary, Ireland.
Phone (052) 22055.

COMPUTER WEEKLY CLASSIFIED

01 261 8028/8097/8019

the newspaper computer people rely on

Aer Rianta

Irish Airports

Aer Rianta - Irish Airports - is engaged in the management and development of the three State Airports at Cork, Dublin and Shannon and operates a variety of commercial activities. Turnover exceeds £40 million per annum. Continuing expansion means an ever-growing need for people and also means opportunity for the individual with excellent prospects for career development. In order to ensure that our systems are geared to meet the rapidly changing requirements of the airport industry our computer development plans include:

Multiple Real-Time Systems Database, Word Processing. We currently support systems on Honeywell Level 64 and Level 6 Computers utilising a distributed network of Terminals and Mini-Computers. On-Line programmes development and 1 U.S. Transaction Processing Software. Our immediate requirement is for experienced people who have been working to high standards with the latest techniques especially Real-Time Systems using Transaction Processing and/or Database Software.

Analyst/Programmers

A minimum of 3 years experience of commercial or financial systems including successful implementation of several projects and a programming background using COBOL are required for this position.

Operations Manager

A minimum of 5 years Operations experience with a medium to large scale installation functioning in a Distributed Processing environment and preferably having had management responsibility for such an Operations Unit.

Systems Programmer

Wide experience of operating systems, data communications, and transaction processing - with some previous applications programming and systems work - is the requirement for this position. Honeywell experience of G.C.O.S. and T.D.S. would be of particular value. I.B.M. experience in C.I.C.S., D.L.I., and D.O.S./V.S. would also be of interest. However, the main ingredient required is adaptability and persons with suitable experience on any equipment will be considered.

In addition to attractive salaries, Aer Rianta offers a pleasant working environment with excellent fringe benefits including free VHI coverage, telephone allowances and assistance with holiday expenses. A contributory pension scheme is in operation. Interview and relocation expenses may be paid where applicable.

To apply, write, giving full details of age, training, work experience and other relevant details, to: Personnel Manager (Ref. 50/80), Aer Rianta-Irish Airports, Head Office, Dublin Airport, or

Mr. Denis J. Hayes, Placement Officer, Professional and Executive Recruitment Section, National Manpower Service, Department of Labour, O'Connell Bridge House, Dublin 2. Latest date for receipt of applications is: 8 Sept. 1980.

M.I.S. Professionals

A career move and a better life in the West of Ireland.

Digital Equipment International is a subsidiary of the world's leading interactive computer manufacturer. We employ 1,100 people in Ireland at three locations: the largest of which - our Galway plant, is the major manufacturing site for Europe. In line with our continued growth, we now require MIS specialists at Programmer/Analyst level and above for Galway and Clonmel.

The MIS department, along with meeting the day-to-day needs of a large manufacturing plant is also our main data centre supporting European volume manufacturing. It utilises a large DEC SYSTEM-10 mainframe using TOPS-10 monitor.

Applications cover a wide range of systems using teleprocessing, database and batch processing techniques.

Salary and conditions of employment are excellent and a generous relocation allowance is payable. We also operate a progressive career development programme, so future prospects are first class.

Galway City, in the West of Ireland, offers excellent social and sporting facilities plus a wide range of attractive housing.

If you are interested, then write to Harry Ruane, Personnel Department, with full details of your experience and qualifications plus, if possible, a telephone number where you can be contacted.

SYSTEMS GROUP

OPERATING SYSTEMS: PROGRAMMER

Salary scale £4402 to £7410 p.a. or £8052 to £8788 p.a., depending upon age and experience required to join a team to develop and support operating systems for future NEW mainframes. Systems programming experience desirable. Ref. 192/80

Applicants for all posts should be educated to degree standard. Benefits include a good pension scheme and generous holiday entitlement. All salary scales are currently under review.

System Programmers for Microcomputers £10-15,000 p.a.

COMPANY:

We are one of the well-known EDP manufacturers in the world with more than 12,000 employees. We are profitable and expanding.

LOCATION:

For our subsidiary in West Berlin we are looking for system programmers.

JOB:

They should be experienced in data communications and networks, particularly with microcomputers in Assembler and HLL (PL/M, Pascal etc.). An additional advantage would be knowledge of Intel 8080, 8088, Zilog Z80, Z8000. Your main responsibilities will be in the development of system modules on real time equipment, e.g. 8 and 16 bit microprocessors.

TRAINING:

We will offer training in case your current programming skills are not relevant.

OFFER:

We offer an attractive salary according to experience, coverage of moving costs to West Berlin, German language training, family education facilities, medical insurance and other excellent fringe benefits. By the way, taxes are lower than in U.K. plus additional advantages for Berlin residents.

CAREER:

We require self-sufficient and ambitious computer professionals who wish to take project responsibility. We, in turn, are offering middle term career opportunities in our subsidiaries all over Europe.

Please send your C.V. to our consultant who will treat your application as strictly confidential, or phone for further information. Interviews will be held in London. (Ref. 598-400)

The Polytechnic of North London

DEPARTMENT OF
MATHEMATICS

Applications are invited for

the following posts in the

Senior Lecturer/Lecturer

(Grade II) in DATA

PROCESSING

Candidates should have a good

honorary degree or equivalent

qualification in a field including

substantial elements of computing or

business systems. They should have

experience in the data processing

field. Applications to the

currently working on computer

systems in business industry or

commerce are welcome.

LECTURER (Grade II) IN

COMPUTING

Candidates should have a good

honorary degree or equivalent

qualification in a field including

substantial elements of computer

science or pure mathematics, or

a combination. They should also have

relevant practical experience in

computing and be able to develop

expertise in the computer for the

aspects of data processing for

the department. Offers should be

in the form of a letter to the

Head of the Department of

Mathematics and Statistics, The

Polytechnic of North London,

Homerton Road, N1 8DB.

Closing date: 14 days from the

appearance of this advertisement.

UNIVERSITY OF THE
WITWATERSRAND,
JOHANNESBURG

**DIVISION OF
COMPUTER SCIENCE**

Applications are invited from suitably

qualified persons, regardless of race,

sex or national origin for appointment

to positions in the Division of Computer

Science. Permanent positions at various

levels are available and applications for

contract or visiting positions are also

welcome. The University will normally

contribute towards travel expenses.

The Division runs a major pro-

gramme in Computing Science in the

Faculty of Science and has a growing

honorary programme. The University

has an IBM 370/158 Computer with

an interactive terminal system and the

Division has its own major computer

laboratory.

Available posts and salary scales are:

Associate Professor R14 850 - R19 500 p.a.

Senior Lecturer R12 750 - R17 100 p.a.

Lecturer R 9 150 - R14 850 p.a.

(C1-R11.80 p.p.p.a.)

In addition the University pays an

annual bonus of approximately one

month's salary to permanent staff.

Intending applicants should obtain

the information sheet relating to these

positions as well as the general infor-

mation sheet which will also give infor-

mation of the lower cost of living and

lower rates of taxation in South Africa.

THE SALES BIT

Qualifying for management

LAST week I wrote about the differences between the responsibilities and activities of a sales manager and those of a salesman. This week I would like to make some recommendations to salesmen who aspire to entering sales management. However, in doing so, I must emphasise that I do not claim to be an expert on sales management techniques. I simply refer to my own experience and the world of selling as I find it.

Perhaps you will identify significant omissions in my coverage of the subject or have profoundly different opinions. If that is the case, I sincerely hope you will write and tell me so.

Compatible

A salesman's qualification for entering sales management is not a direct function of his track record of sales success. Being the company's top salesman is no more of a qualifier than it is a disqualifier. The primary qualifications for advancement from territory sales into management are:

1. The opportunity has been earned by virtue of successfully completing the tasks that have been set to date.
2. The individual's human characteristics are compatible with the demands of the job. (This evaluation should involve both subjective and objective analysis as well as considering past behaviour.)

20 questions

Having considered the initial qualification, the salesman needs to give close consideration to several facets of his personality and performance before committing himself to the pursuit of a management role.

1. Does he without exception always work in the best interests of his employer?
2. Can he work without supervision?
3. Does he respond constructively to being managed himself?
4. Is he receptive to new ideas?

TRADER

Database for Eurocrats

The European Conference on Evaluation and Implementation of Database Systems is to be held in Brussels on September 20-22. The language of the conference will be English. The conference is expected to attract manufacturers of hardware and software, user groups and Eurocrats. Copies of the

Puzzle Answer

THE first throw must obviously produce a double number for certain, and the second will produce a different number in five cases out of six (or on average, in 5/6 throws). A third number has four chances out of six of appearing on the next throw (or, on average, in 4/6 more throws). Putting this another way,

HERTFORDSHIRE PLANNING DEPARTMENT COMPUTER PROGRAMMER

Salary range £8795-£7881 (plus national pay award pending)

Vacancy for an experienced programmer to work as a member of a small team. Will participate in a range of applications and information systems concerned with planning subjects including population, employment, land availability, archaeology and transportation.

The mainframe computer is a NCR Criterion and experience in COBOL programming essential. The Department also uses at present two Commodore PET Micro Computers for specialist needs and knowledge/experience in this developing area and of BASIC language would be an advantage.

Job based at County Hall, Hertford, pleasant offices with good amenities for staff.

Commencing salary within Senior Officer 1/2 grade dependent on qualifications and experience. Good conditions of service including contributory pension fund; generous personal relocation and disturbance expenses payable up to £2,300 in approved circumstances.

Application forms from the Chief Administrative Officer, County Planning Department, County Hall, Hertford SG13 8DN (or phone Hertford 84242, Ext 8608), quoting Post 88. Closing date for applications: 28 September, 1980. (2950)

datascene

Snr. Analyst/Programmer

Middlesex c. £8000 + car

Our clients, whose reputation has been established over several years in the manufacturing field, seek a motivated analyst/programmer with a good knowledge of RPG II, preferably on 34 machinery. The work is interesting and varied, covering distribution and accounting projects using installed packages. In addition to a good salary, the company offers a car, an annual bonus and subsidised restaurant. REF. 4540

Programmers

Middlesex c. £7000

A company producing brand-name cosmetics seeks programmers (male or female) to complete their team. The company, a leader in its field and a household name, utilises an IBM 370 machine with on-line working. A minimum of one year's IBM COBOL experience is a pre-requisite, which ideally will have been gained on DOS/VS operating systems using CICS. In return the company offers a subsidised restaurant, 23 days' annual leave and discounted products. REF. 4513

COBOL Programmer

Hampshire to £7500

Our client is a leading, successful manufacturer of agricultural equipment. Their requirement is for programmers of any length of experience. The machinery is ICL and the language COBOL, and candidates should have knowledge of both. Excellent opportunity to progress into team leadership. Company benefits include a subsidised restaurant, life assurance and pension schemes, and 23 days' annual leave. REF. 4496

Programmers

Middlesex c. £7500

A very well-known household named company, whose reputation is envied, seeks programmers to complement their existing team. The company needs people with two years' experience of on-line working with COBOL. A useful addition would be a working knowledge of CICS, but this is not essential as training will be given. Benefits include a company bonus (c. 2 weeks' salary), 5 weeks' holidays and subsidised company products. REF. 4405

COBOL Programmer

West London £7000

Expansion has meant that this well-known bureau to the West of London is looking for a COBOL programmer with around eighteen months' experience in a wide range of commercial applications. Univac hardware is used and a wide range of company benefits is offered, which includes a yearly bonus, LV's and substantial discount on goods offered by the parent company. REF. R4508

FORTRAN Programmers

Central London £8000

We have two clients with current vacancies for experienced FORTRAN programmers. Both companies require at least two years' experience with an engineering or telecommunications background, one of the companies being involved in petrochemicals and the other a large software house and bureau. Both companies offer a comprehensive range of benefits and represent fine opportunities for suitably qualified applicants. REF. R4521/8

Analyst/Programmer

S.W. London £8000

A manufacturing company in S.W. London require a skilled and communicative person to supplement their existing team. The applicant should have three to four years' experience in a high level language such as BASIC or COBOL, and should be familiar with communication networks. DEC hardware is used and the company's range of benefits include four weeks' holiday, good insurance and pension schemes and a subsidised restaurant. REF. R4514

BASIC + /BASIC + 2 Programmers

City £7500

We are in contact with three banks in the City who are seeking programmers with upwards of eighteen months' experience in BASIC + /BASIC + 2 or AIMS. Successful applicants can expect to be working in a batch and real-time environment on applications such as foreign exchange and eurobonds. Opportunities for career progression are excellent and the employment packages offered are without equal. REF. R4529

The above vacancies are only a small selection from those currently on our files and we are always delighted to talk to experienced systems and programming staff wishing to further their careers.

O. Kelly Esq.,
Computer Weekly,
Grove House,
Skerton Road,
Old Trafford,
MANCHESTER

Dear Owen,

I thought you may be interested to know that our advertisement in the Northern Recruitment Feature recently, was extremely successful. We received 25 high quality replies and are still processing these on behalf of our client.

Thank you for your help which, as usual, was "above and beyond the call of duty".

Yours sincerely,

ROB. J. PEELING
Managing Director

Dear Owen,

Recently we advertised on behalf of one of our clients in "COMPUTER WEEKLY" Northern Feature on the 26th June. Our clients are specialists in Real-Time Industrial Systems and have difficulty locating D.P. professionals in this particular field.

However, the response from "COMPUTER WEEKLY" was very good indeed, and the calibre was excellent.

Our clients are delighted and are much to be thanked for the service and response you or the candidate.

QUADRANT has always been pleased with the services and response from "COMPUTER WEEKLY" and we recommend this media for employing D.P. professionals in the North.

Yours sincerely,

Frank Rogers,
Managing Consultant

Dear Owen,

As you know since Data Resources was established all our advertising has been carried by Computer Weekly, and we have always been pleased with the results.

I am sure you will be interested to know that the advertisement we used in the recent Northern Recruitment Feature again followed the pattern and the level and quality of the response was first class.

I look forward to continuing this very successful relationship with you for some time to come.

Yours sincerely,

Dear Owen,

Just a line to say how pleased I am with the response I received in our latest advertisement placed with you.

At a time when there is a great deal of movement of computer professionals from one company to another, it is very difficult to find the right person for the job. I have always been able to find the right person for the job, and I am sure you will be interested to know that the advertisement we used in the recent Northern Recruitment Feature again followed the pattern and the level and quality of the response was first class.

I look forward to continuing this very successful relationship with you for some time to come.

Yours sincerely,
